

TXS0104E 4-Bit Bidirectional Voltage-Level Translator for Open-Drain and Push-Pull Applications

1 Features

- No Direction-Control Signal Needed
- Max Data Rates
 - 24 Mbps (Push Pull)
 - 2 Mbps (Open Drain)
- Available in the Texas Instruments NanoFree™ Package
- 1.65 V to 3.6 V on A port and 2.3 V to 5.5 V on B port ($V_{CCA} \leq V_{CCB}$)
- No Power-Supply Sequencing Required – V_{CCA} or V_{CCB} Can Be Ramped First
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
 - A Port
 - 2000-V Human-Body Model (A114-B)
 - 200-V Machine Model (A115-A)
 - 1000-V Charged-Device Model (C101)
 - B Port
 - 15-kV Human-Body Model (A114-B)
 - 200-V Machine Model (A115-A)
 - 1000-V Charged-Device Model (C101)
- IEC 61000-4-2 ESD (B Port)
 - ± 8 -kV Contact Discharge
 - ± 10 -kV Air-Gap Discharge

2 Applications

- Handset
- Smartphone
- Tablet
- Desktop PC

3 Description

This 4-bit non-inverting translator uses two separate configurable power-supply rails. The A port is designed to track V_{CCA} . V_{CCA} accepts any supply voltage from 1.65 V to 3.6 V. V_{CCA} must be less than or equal to V_{CCB} . The B port is designed to track V_{CCB} . V_{CCB} accepts any supply voltage from 2.3 V to 5.5 V. This allows for low-voltage bidirectional translation between any of the 1.8-V, 2.5-V, 3.3-V, and 5-V voltage nodes.

When the output-enable (OE) input is low, all outputs are placed in the high-impedance state.

The TXS0104E is designed so that the OE input circuit is supplied by V_{CCA} .

To ensure the high-impedance state during power up or power down, OE should be tied to GND through a pulldown resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver.

Device Information⁽¹⁾

| PART NUMBER | PACKAGE | BODY SIZE (NOM) |
|--------------|------------|-------------------|
| TXS0104ED | SOIC (14) | 8.65 mm × 3.91 mm |
| TXS0104EPW | TSSOP (14) | 5.00 mm × 4.40 mm |
| TXS0104EZ XU | BGA (12) | 2.00 mm × 2.50 mm |
| TXS0104ERGY | VQFN (14) | 3.50 mm × 3.50 mm |
| TXS0104EYZT | DSBGA (12) | 1.87 mm × 1.37 mm |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision G (September 2017) to Revision H Page

- Changed maximum values for maximum data rate within *Switching Characteristics: $V_{CCA} = 3.3\text{ V} \pm 0.3\text{ V}$* table **15**

Changes from Revision F (December 2014) to Revision G Page

- Changed Device Information table **1**
- Deleted GXU references throughout **4**
- Added Junction temperature in the *Absolute Maximum Ratings*..... **7**
- Reformatted *Electrical Characteristics*..... **9**
- Added *Basics of Voltage Translation* to Related Documentation..... **24**
- Added *Receiving Notification of Documentation Updates* and *Community Resources* **24**

Changes from Revision E (August 2013) to Revision F Page

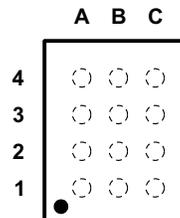

- Added *Pin Configuration and Functions* section, *Handling Rating* table, *Feature Description* section, *Device Functional Modes*, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section **1**
- Deleted the Package thermal impedance information from the Absolute max ratings table into the Thermal Information table. Moved the T_{stg} row into the new Handling Ratings table. **7**
- Changed the last 2 rows of MIN MAX (24 MAX and 2 MAX) to the MIN columns, in the first switching characteristics table **12**

Changes from Revision D (May 2008) to Revision E**Page**

-
- Deleted the ordering table 1
-

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

| | | MIN | MAX | UNIT |
|--|-----------|------|-----------------|------|
| Supply voltage, V_{CCA} | | -0.5 | 4.6 | V |
| Supply voltage, V_{CCB} | | -0.5 | 6.5 | V |
| Input voltage, V_I ⁽²⁾ | A port | -0.5 | 4.6 | V |
| | B port | -0.5 | 6.5 | |
| Voltage range applied to any output in the high-impedance or power-off state, V_O ⁽²⁾ | A port | -0.5 | 4.6 | V |
| | B port | -0.5 | 6.5 | |
| Voltage range applied to any output in the high or low state, V_O ^{(2) (3)} | A port | -0.5 | $V_{CCA} + 0.5$ | V |
| | B port | -0.5 | $V_{CCB} + 0.5$ | |
| Input clamp current, I_{IK} | $V_I < 0$ | | -50 | mA |
| Output clamp current, I_{OK} | $V_O < 0$ | | -50 | mA |
| Continuous output current, I_O | | -50 | 50 | mA |
| Continuous current through each V_{CCA} , V_{CCB} , or GND | | -100 | 100 | mA |
| Operating junction temperature, T_J | | | 150 | °C |
| Storage temperature, T_{STG} | | -65 | 150 | °C |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
- (3) The value of V_{CCA} and V_{CCB} are provided in the recommended operating conditions table.

6.2 ESD Ratings

| | | VALUE | UNIT |
|-------------------------------------|--|--------|-------|
| $V_{(ESD)}$ Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾ | A Port | ±2000 |
| | | B Port | ±15 |
| | Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾ | A Port | ±1000 |
| | | B Port | ±1000 |
| | Machine model (MM) | A Port | ±200 |
| | | B Port | ±200 |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

 over operating free-air temperature range (unless otherwise noted)⁽¹⁾ ⁽²⁾

| | | V_{CCA} | V_{CCB} | MIN | MAX | UNIT | |
|---------------------|------------------------------------|-------------------------------|------------------|----------------|-----------------------|-----------------------|------|
| V_{CCA} | Supply voltage ⁽³⁾ | | | 1.65 | 3.6 | V | |
| V_{CCB} | Supply voltage ⁽³⁾ | | | 2.3 | 5.5 | V | |
| V_{IH} | High-level input voltage | A-port I/Os | 1.65 V to 1.95 V | 2.3 V to 5.5 V | $V_{CCI} - 0.2$ | V_{CCI} | V |
| | | | 2.3 V to 3.6 V | 2.3 V to 5.5 V | $V_{CCI} - 0.4$ | V_{CCI} | |
| | | B-port I/Os | 1.65 V to 3.6 V | 2.3 V to 5.5 V | $V_{CCI} - 0.4$ | V_{CCI} | |
| | | OE input | 1.65 V to 3.6 V | 2.3 V to 5.5 V | $V_{CCA} \times 0.65$ | 5.5 | |
| V_{IL} | Low-level input voltage | A-port I/Os | 1.65 V to 3.6 V | 2.3 V to 5.5 V | 0 | 0.15 | V |
| | | B-port I/Os | 1.65 V to 3.6 V | 2.3 V to 5.5 V | 0 | 0.15 | |
| | | OE input | 1.65 V to 3.6 V | 2.3 V to 5.5 V | 0 | $V_{CCA} \times 0.35$ | |
| $\Delta t/\Delta V$ | Input transition rise or fall rate | A-port I/Os push-pull driving | 1.65 V to 3.6 V | 2.3 V to 5.5 V | | 10 | ns/V |
| | | B-port I/Os push-pull driving | 1.65 V to 3.6 V | 2.3 V to 5.5 V | | 10 | |
| | | Control input | 1.65 V to 3.6 V | 2.3 V to 5.5 V | | 10 | |
| T_A | Operating free-air temperature | | | -40 | 85 | °C | |

- (1) V_{CCI} is the supply voltage associated with the input port.
- (2) V_{CCO} is the supply voltage associated with the output port.
- (3) V_{CCA} must be less than or equal to V_{CCB} , and V_{CCA} must not exceed 3.6 V.

6.4 Thermal Information: ZXU and YZT

| THERMAL METRIC ⁽¹⁾ | | TXS0104E | | UNIT |
|-------------------------------|--|---|-------------|------|
| | | ZXU (BGA MICROSTAR JUNIOR) ⁽²⁾ | YZT (DSBGA) | |
| | | 12 PINS | 12 PINS | |
| $R_{\theta JA}$ | Junction-to-ambient thermal resistance | 132.0 | 89.2 | °C/W |
| $R_{\theta JC(top)}$ | Junction-to-case (top) thermal resistance | 98.4 | 0.9 | °C/W |
| $R_{\theta JB}$ | Junction-to-board thermal resistance | 68.7 | 14.4 | °C/W |
| Ψ_{JT} | Junction-to-top characterization parameter | 3.1 | 3.0 | °C/W |
| Ψ_{JB} | Junction-to-board characterization parameter | 68.2 | 14.4 | °C/W |

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.
- (2) The package thermal impedance is calculated in accordance with JESD 51-7.

6.5 Thermal Information: D, PW, and RGY

| THERMAL METRIC ⁽¹⁾ | | TXS0104E | | | UNIT |
|-------------------------------|--|-------------------------|---------------------------|---------------------------|------|
| | | D (SOIC) ⁽¹⁾ | PW (TSSOP) ⁽²⁾ | RGY (VQFN) ⁽³⁾ | |
| | | 14 PINS | 14 PINS | 14 PINS | |
| $R_{\theta JA}$ | Junction-to-ambient thermal resistance | 90.4 | 120.1 | 56.1 | °C/W |
| $R_{\theta JC(top)}$ | Junction-to-case (top) thermal resistance | 50.1 | 49.4 | 68.8 | °C/W |
| $R_{\theta JB}$ | Junction-to-board thermal resistance | 45.0 | 61.8 | 32.1 | °C/W |
| Ψ_{JT} | Junction-to-top characterization parameter | 14.4 | 6.2 | 3.1 | °C/W |
| Ψ_{JB} | Junction-to-board characterization parameter | 44.7 | 61.2 | 32.3 | °C/W |
| $R_{\theta JC(bot)}$ | Junction-to-case (bottom) thermal resistance | — | — | 12.8 | °C/W |

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.
- (2) The package thermal impedance is calculated in accordance with JESD 51-7.
- (3) The package thermal impedance is calculated in accordance with JESD 51-5.

6.6 Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted) ⁽¹⁾ ⁽²⁾ ⁽³⁾

| PARAMETER | | TEST CONDITIONS | V _{CCA} | V _{CCB} | MIN | TYP | MAX | UNIT | |

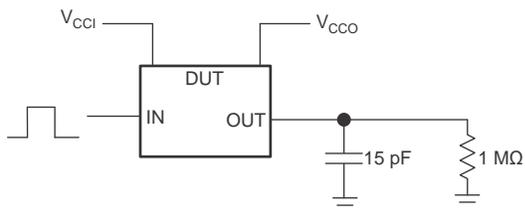

Figure 4. Data Rate, Pulse Duration, Propagation Delay, Output Rise-Time and Fall-Time Measurement Using a Push-Pull Driver

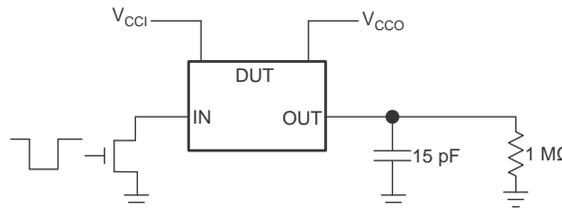

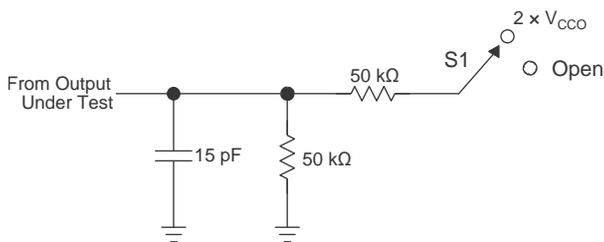

Figure 5. Data Rate, Pulse Duration, Propagation Delay, Output Rise-Time and Fall-Time Measurement Using an Open-Drain Driver

| TEST | S1 |
|--------------------------------------|--------------------|
| t_{PZL} / t_{PLZ} (t_{dis}) | $2 \times V_{CCO}$ |
| t_{PHZ} / t_{PZH} (t_{en}) | Open |

Figure 6. Load Circuit for Enable-Time and Disable-Time Measurement

1. t_{PLZ} and t_{PHZ} are the same as t_{dis} .
2. t_{PZL} and t_{PZH} are the same as t_{en} .
3. V_{CCI} is the V_{CC} associated with the input port.
4. V_{CCO} is the V_{CC} associated with the output port.

7.2 Voltage Waveforms

The outputs are measured one at a time, with one transition per measurement. All input pulses are supplied by generators that have the following characteristics:

- $PRR \leq 10 \text{ MHz}$
- $Z_O = 50 \Omega$
- $dv/dt \geq 1 \text{ V/ns}$

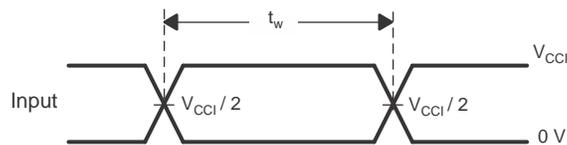

Figure 7. Pulse Duration

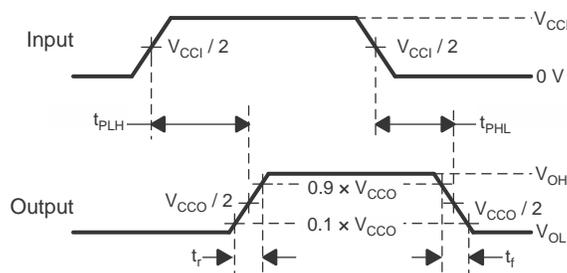

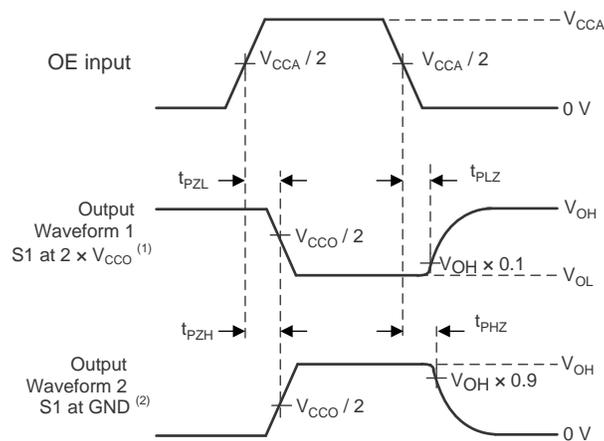

Figure 8. Propagation Delay Times

(1) Waveform 1 is for an output with internal such that the output is high, except when OE is high (see Figure 6).

(2) Waveform 2 is for an output with conditions such that the output is low, except when OE is high.

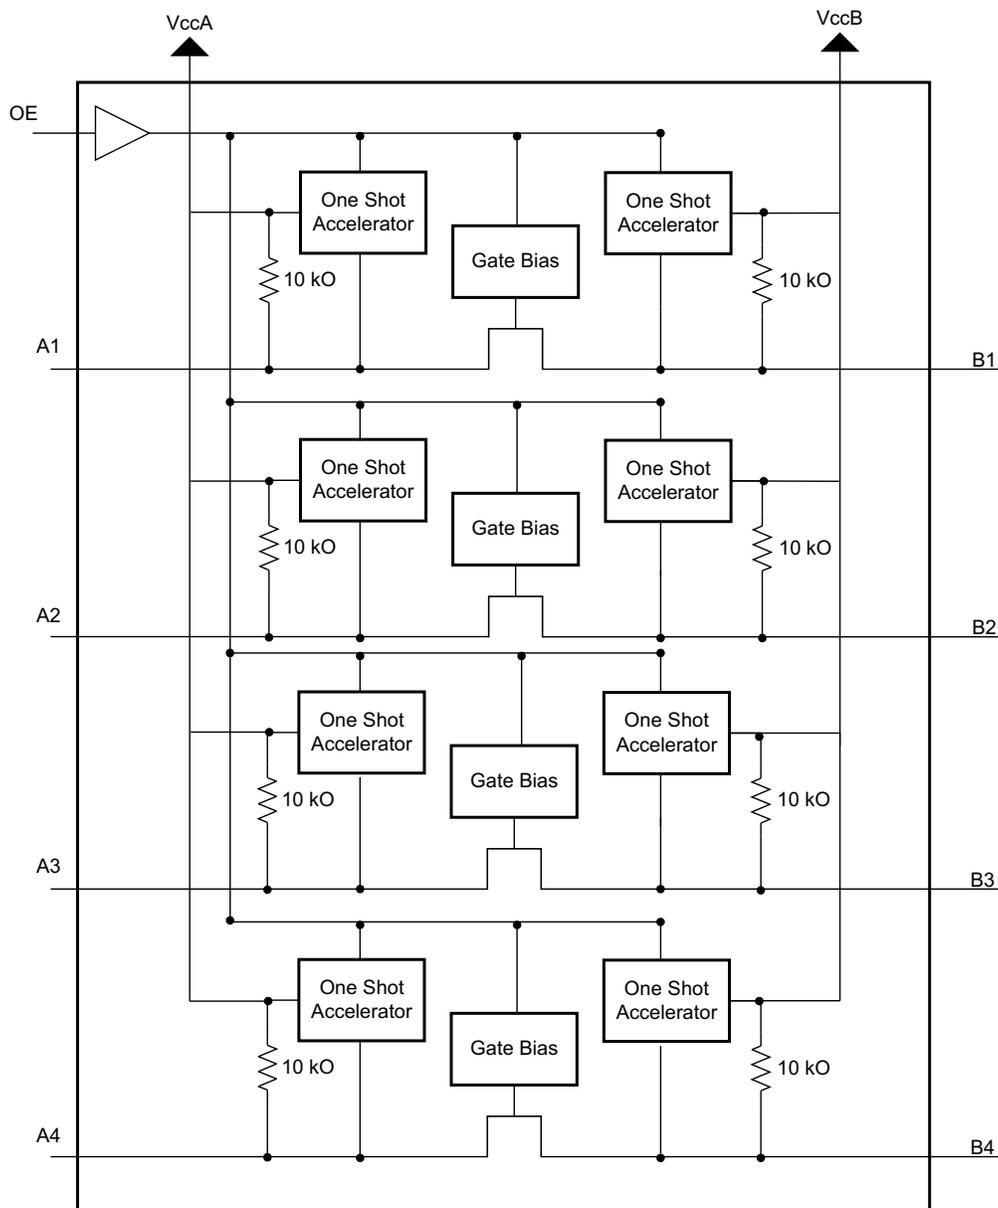

Figure 9. Enable and Disable Times

8 Detailed Description

8.1 Overview

The TXS0104E device is a directionless voltage-level translator specifically designed for translating logic voltage levels. The A port is able to accept I/O voltages ranging from 1.65 V to 3.6 V, while the B port can accept I/O voltages from 2.3 V to 5.5 V. The device is a pass gate architecture with edge rate accelerators (one shots) to improve the overall data rate. 10-kΩ pullup resistors, commonly used in open drain applications, have been conveniently integrated so that an external resistor is not needed. While this device is designed for open drain applications, the device can also translate push-pull CMOS logic outputs.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Architecture

The TXS0104E architecture (see [Figure 10](#)) does not require a direction-control signal in order to control the direction of data flow from A to B or from B to A.

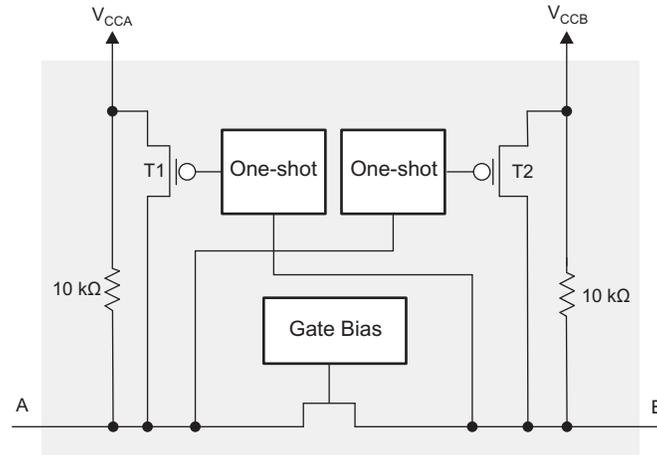

Figure 10. Architecture of a TXS01xx Cell

Each A-port I/O has an internal 10-k Ω pullup resistor to V_{CCA} , and each B-port I/O has an internal 10-k Ω pullup resistor to V_{CCB} . The output one-shots detect rising edges on the A or B ports. During a rising edge, the one-shot turns on the PMOS transistors (T1, T2) for a short duration which speeds up the low-to-high transition.

8.3.2 Input Driver Requirements

The fall time (t_{fA} , t_{fB}) of a signal depends on the output impedance of the external device driving the data I/Os of the TXS0104E device. Similarly, the t_{PHL} and maximum data rates also depend on the output impedance of the external driver. The values for t_{fA} , t_{fB} , t_{PHL} , and maximum data rates in the data sheet assume that the output impedance of the external driver is less than 50 Ω .

8.3.3 Power Up

During operation, ensure that $V_{CCA} \leq V_{CCB}$ at all times. During power-up sequencing, $V_{CCA} \geq V_{CCB}$ does not damage the device, so any power supply can be ramped up first.

8.3.4 Enable and Disable

The TXS0104E device has an OE input that disables the device by setting OE low, which places all I/Os in the high-impedance state. The disable time (t_{dis}) indicates the delay between the time when the OE pin goes low and when the outputs actually enter the high-impedance state. The enable time (t_{en}) indicates the amount of time the user must allow for the one-shot circuitry to become operational after the OE pin is taken high.

8.3.5 Pullup and Pulldown Resistors on I/O Lines

Each A-port I/O has an internal 10-k Ω pullup resistor to V_{CCA} , and each B-port I/O has an internal 10-k Ω pullup resistor to V_{CCB} . If a smaller value of pullup resistor is required, an external resistor must be added from the I/O to V_{CCA} or V_{CCB} (in parallel with the internal 10-k Ω resistors).

8.4 Device Functional Modes

The TXS0104E device has two functional modes, enabled and disabled. To disable the device set the OE input low, which places all I/Os in a high impedance state. Setting the OE input high will enable the device.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TXS0104E device can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The TXS0104E device is ideal for use in applications where an open-drain driver is connected to the data I/Os. The TXS0104E device can also be used in applications where a push-pull driver is connected to the data I/Os, but the TXB0104 device might be a better option for such push-pull applications.

9.2 Typical Application

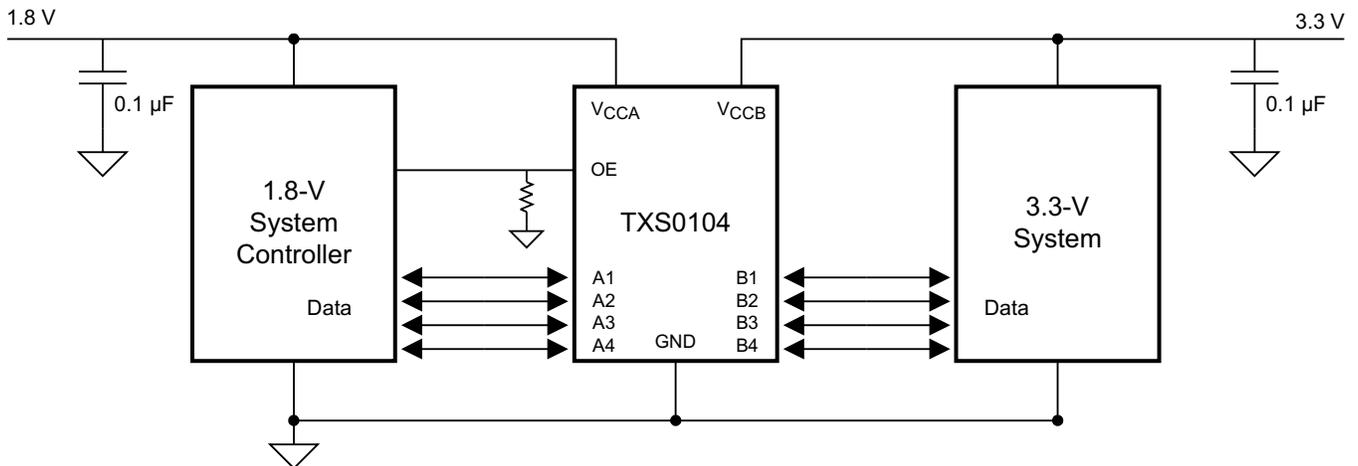

Figure 11. Application Schematic

9.2.1 Design Requirements

For this design example, use the parameters listed in [Table 1](#).

Table 1. Design Parameters

| DESIGN PARAMETER | EXAMPLE VALUE |
|----------------------|---------------|
| Input voltage range | 1.65 to 3.6 V |
| Output voltage range | 2.3 to 5.5 V |

9.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range
 - Use the supply voltage of the device that is driving the TXS0104E device to determine the input voltage range. For a valid logic high the value must exceed the V_{IH} of the input port. For a valid logic low the value must be less than the V_{IL} of the input port.
- Output voltage range
 - Use the supply voltage of the device that the TXS0104E device is driving to determine the output voltage range.
 - The TXS0104E device has 10-k Ω internal pullup resistors. External pullup resistors can be added to reduce the total RC of a signal trace if necessary.
- An external pull down resistor decreases the output V_{OH} and V_{OL} . Use [Equation 1](#) to calculate the V_{OH} as a result of an external pull down resistor.

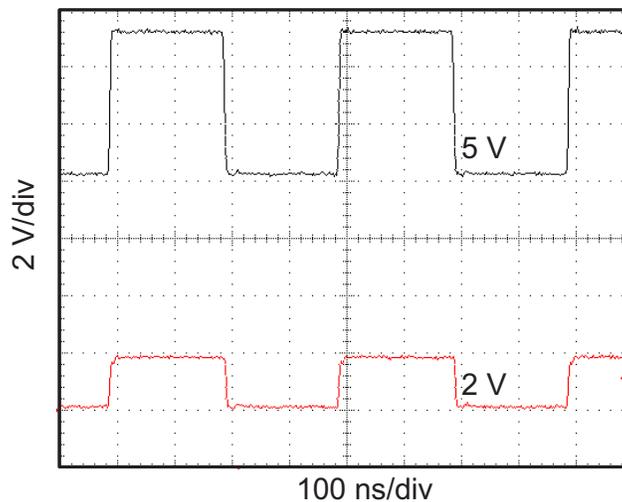

$$V_{OH} = V_{CCx} \times R_{PD} / (R_{PD} + 10 \text{ k}\Omega) \quad (1)$$

where

V_{CCx} is the supply voltage on either V_{CCA} or V_{CCB}

R_{PD} is the value of the external pull down resistor

9.2.3 Application Curve

$$V_{CCA} = 1.8 \text{ V}$$

$$V_{CCB} = 5 \text{ V}$$

Figure 12. Level-Translation of a 2.5-MHz Signal

10 Power Supply Recommendations

The TXS0104E device uses two separate configurable power-supply rails, V_{CCA} and V_{CCB} . V_{CCB} accepts any supply voltage from 2.3 V to 5.5 V and V_{CCA} accepts any supply voltage from 1.65 V to 3.6 V as long as V_S is less than or equal to V_{CCB} . The A port and B port are designed to track V_{CCA} and V_{CCB} respectively allowing for low-voltage bidirectional translation between any of the 1.8-V, 2.5-V, 3.3-V, and 5-V voltage nodes.

The TXS0104E device does not require power sequencing between V_{CCA} and V_{CCB} during power-up so the power-supply rails can be ramped in any order. A V_{CCA} value greater than or equal to V_{CCB} ($V_{CCA} \geq V_{CCB}$) does not damage the device, but during operation, V_{CCA} must be less than or equal to V_{CCB} ($V_{CCA} \leq V_{CCB}$) at all times.

The output-enable (OE) input circuit is designed so that it is supplied by V_{CCA} and when the (OE) input is low, all outputs are placed in the high-impedance state. To ensure the high-impedance state of the outputs during power up or power down, the OE input pin must be tied to GND through a pull-down resistor and must not be enabled until V_{CCA} and V_{CCB} are fully ramped and stable. The minimum value of the pull-down resistor to ground is determined by the current-sourcing capability of the driver.

11 Layout

11.1 Layout Guidelines

To ensure reliability of the device, following common printed-circuit board layout guidelines is recommended.

- Bypass capacitors should be used on power supplies.
- Short trace lengths should be used to avoid excessive loading.
- PCB signal trace-lengths must be kept short enough so that the round-trip delay of any reflection is less than the one shot duration, approximately 30 ns, ensuring that any reflection encounters low impedance at the source driver.
- Placing pads on the signal paths for loading capacitors or pullup resistors to help adjust rise and fall times of signals depending on the system requirements

11.2 Layout Example

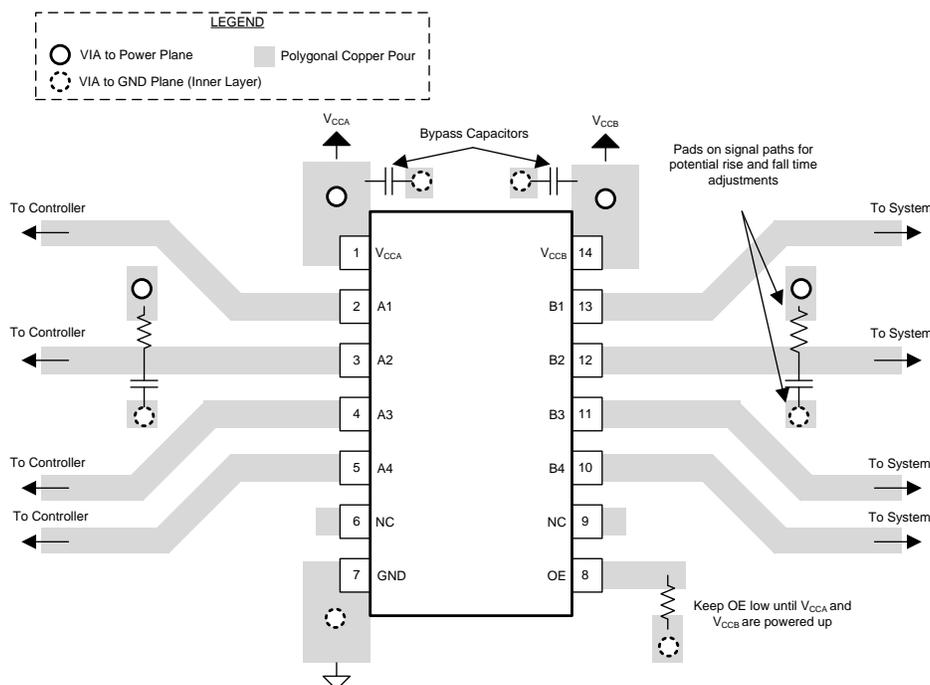

Figure 13. TXS0104E Layout Example

12 Device and Documentation Support

12.1 Documentation Support

12.1.1 Related Documentation

For related documentation see the following:

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

PLASTIC QUAD FLATPACK NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
