

**24-V Input, 180-mA Output
High Voltage and Low Quiescent Current LDO**

Features

- Wide Input Voltage Range: 3.6 V to 24 V
- $\pm 1\%$ Output Accuracy Under Room Temperature
 - Fixed Output: 2.8 V, 3 V, 3.3 V, and 5 V
 - Adjustable Output: 1.2 V to 15 V
- Ultra-Low Quiescent Current: 2 μ A
- Maximum Output Current: 180 mA
- Low Dropout Voltage: 200 mV at 50 mA
- High PSRR: 73 dB at 100 Hz
- Current Limit and Thermal Protection
- Stable with 2.2 μ F to 22 μ F Low ESR Ceramic Capacitor
- Soft Start Limits Input Current Surge During Enable
- Thermal Shutdown Protection
- Junction Temperature Range: -40°C to $+125^{\circ}\text{C}$
- Packages: SOT89-3, SOT23-5, SOT23-3

Applications

- Handheld Devices with Battery Power Supply
- POS and Power Tools
- Meters and Smoke Detector
- Industrial control
- Wireless and IoT modules

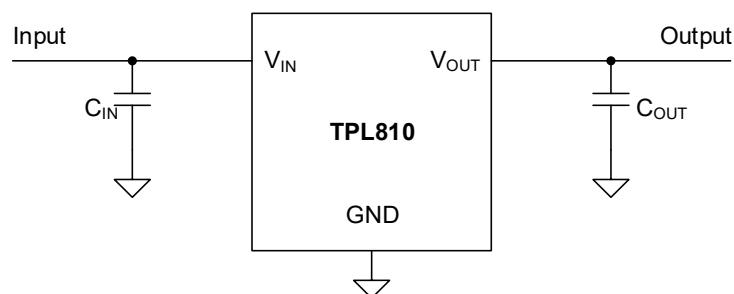

Description

The TPL810 series products are high-performance and low dropout linear regulators. The TPL810 series products support a maximum 24 V input voltage and 180 mA output current with low quiescent current and high PSRR. The TPL810 series products are stable with a 2.2 μ F to 22 μ F output capacitor, and a 4.7 μ F ceramic capacitor is recommended.

The TPL810 series products have a high PSRR with 73 dB at 100 Hz. This feature makes TPL810 series products very suitable for power-sensitive applications with high noise from the previous stage power supply. 2 μ A ultra-low quiescent current makes the TPL810 series products ideal choices for portable devices with battery power supply. Current-limit and thermal overload protection circuits improve the reliability under heavy load conditions.

The TPL810 series products provide fixed output voltage options from 2.8 V to 5 V and adjustable output voltage from 1.2 V to 15 V with $\pm 2\%$ voltage accuracy over operating conditions. The TPL810 series products are guaranteed over the junction temperature range from -40°C to $+125^{\circ}\text{C}$.

Revision History

Date	Revision	Notes
2018-09-28	Rev.Pre	Preliminary version
2018-11-27	Rev.A.0	Initial release
2019-05-31	Rev.A.1	Added adjustable output version and fixed 3.7 V output version
2020-04-30	Rev.A.2	Updated thermal information of SOT89-3 package
2021-03-29	Rev.A.3	1. Changed the pin 1 orientation of the SOT23-3 package 2. Added Tape and Reel Information
2021-06-04	Rev.A.4	Corrected the pin name mistake of the SOT23-5 package
2021-08-31	Rev.A.5	Output current changed from 200 mA to 180 mA
2022-03-21	Rev.A.6	1. Added output capacitor upper limit 2. Removed ambient temperature range 3. Removed 1.2 V, 1.8 V, 2.5 V, 3.7 V, and 4.5 V output version 4. Removed SOT89-3 (B) package

**24-V Input, 180-mA Output
High Voltage and Low Quiescent Current LDO**

Pin Configuration and Functions

Pin Functions

Pin Name	Pin Number				I/O	Description
	SOT89-3	SOT23-5	SOT23-5 (B)	SOT23-3		
IN	3	1	2	3	I	Input voltage pin.
NC	-	3, 4	4,5	-	-	No connection.
FB	-	4	-	-	I	Output feedback pin (Adjustable version only).
OUT	1	5	3	2	O	Regulated output voltage pin.
GND	2	2	1	1	-	Ground reference pin. Connect GND pin to PCB ground plane directly.

(1) Thermal pad must be connected to the PCB ground plane to maximize the thermal performance.

Specifications

Absolute Maximum Ratings

Parameter		Min	Max	Unit
V_{IN}	Input Voltage	-0.3	45	V
V_{OUT}	Output Voltage (Fixed version)	-0.3	6	V
V_{OUT}	Output Voltage (Adjustable version)	-0.3	20	V
V_{FB}	Feedback Voltage (Adjustable version)	-0.3	6	V
T_J	Junction Temperature Range	-40	150	°C
T_{STG}	Storage Temperature Range	-65	150	°C
T_L	Lead Temperature (Soldering 10 sec)		260	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

(2) All voltage values are with respect to GND.

ESD, Electrostatic Discharge Protection

Symbol	Parameter	Condition	Minimum Level	Unit
HBM	Human Body Model ESD	ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2.5	kV
CDM	Charged Device Model ESD	ANSI/ESDA/JEDEC JS-002 ⁽²⁾	±2	kV

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

Recommended Operating Conditions

Parameter		Min	Max	Unit
V_{IN}	Input Voltage	3.6	24	V
V_{OUT}	Output Voltage (Fixed version)	1.2	5	V
V_{OUT}	Output Voltage (Adjustable version)	1.2	15	V
I_{OUT}	Output Current	0	180	mA
T_J	Operating Junction Temperature Range	-40	125	°C
P_D	Power Dissipation (SOT89-3 Package)	0	1000	mW
	Power Dissipation (SOT23-5 Package)	0	300	mW
	Power Dissipation (SOT23-3 Package)	0	300	mW

Thermal Information

Package Type	θ_{JA}	θ_{JC}	Unit

Detailed Description

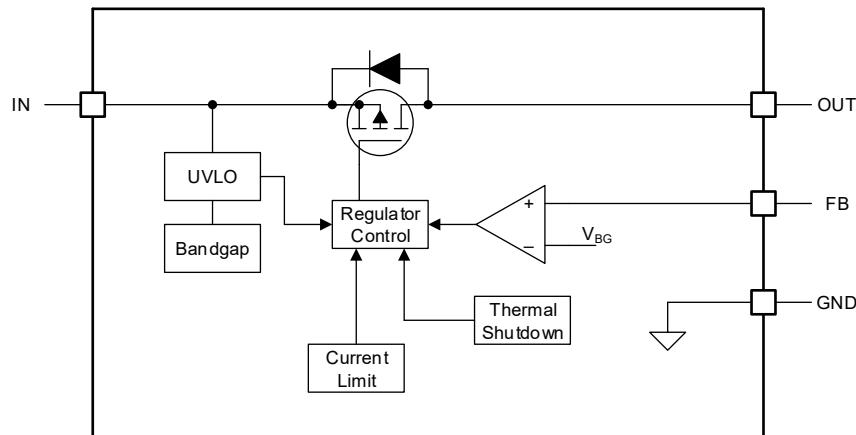

Overview

The TPL810 series products are 24-V 180-mA wide input range linear regulators with a very low quiescent current. These voltage regulators operate from 3.6 V to 24 V and consume 2 μ A of quiescent current at no load. The TPL810 series products are available in fixed output voltage versions of 2.8 V, 3 V, 3.3 V, and 5 V, and adjustable output voltage from 1.2 V to 15 V with $\pm 2\%$ output voltage accuracy over operating conditions.

Functional Block Diagram

TPL810 Series (Fixed version)

TPL810 Series (Adjustable version)

Feature Description

Under-Voltage Lockout (UVLO)

The TPL810 series uses an under-voltage lock-out circuit (UVLO = 2.9 V) to shut the output down until the internal circuitry operates properly.

24-V Input, 180-mA Output High Voltage and Low Quiescent Current LDO

Regulated Output Voltage

The TPL810 series are available in fixed output voltage versions of 2.8 V, 3 V, 3.3 V, and 5 V. When the input voltage is higher than $V_{OUT(NOM)} + V_{DO}$ or 3.6 V, the output pin is the regulated output based on the selected voltage version. When the input voltage falls below $V_{OUT(NOM)} + V_{DO}$ or 3.6 V, the output pin tracks the input voltage minus the dropout voltage based on the load current. When the input voltage drops below the UVLO threshold, the output keeps shutting off.

Adjustable Output Voltage

The TPL810 series are also available in adjustable output voltage from 1.2 V to 15 V by selecting suitable external resistor dividers.

Use [Equation 1](#) to calculate the output voltage ($V_{FB} = 1.2 \text{ V}$). Suggest select resistor value of $(R1 + R2)$ between 10 k Ω and 100 k Ω .

$$V_{OUT} = V_{FB} \times \left(1 + \frac{R1}{R2} \right) \quad (1)$$

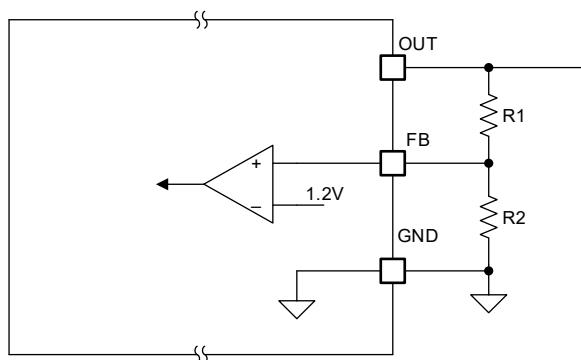

Figure 11. Adjustable Version

Current Limit

The TPL810 series integrates an internal current limit that helps to protect the regulator during fault conditions. The output voltage is not regulated when the device is in the current limit mode and is $V_{OUT} = I_{CL} \times R_{LOAD}$.

Thermal Shutdown

During normal operation, LDO junction temperature should not exceed 125°C. When the junction temperature exceeds the thermal shutdown threshold, the LDO shut down the output immediately. Until when the junction temperature falls below the thermal shutdown threshold minus thermal shutdown hysteresis, the output turns on again.

Application and Implementation

NOTE

Information in the following applications sections is not part of the 3PEAK's component specification and 3PEAK does not warrant its accuracy or completeness. 3PEAK's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

Application Information

The TPL810 series products are 24-V 180-mA wide input range linear regulators with a very low quiescent current. The following application schematic shows a typical usage of the TPL810 series.

Typical Application

Figure 12 shows the typical application schematic of the TPL810 series.

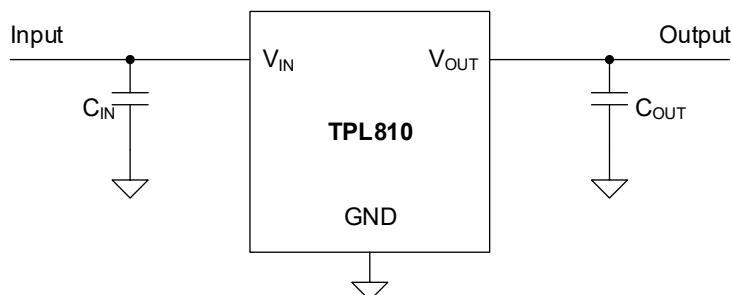

Figure 12. TPL810 Typical Application

Input Capacitor and Output Capacitor

3PEAK recommends adding a 2.2 μF or greater capacitor with a 0.1 μF bypass capacitor in parallel at IN pin to keep the input voltage stable. An aluminum electrolytic capacitor or other capacitors with high capacitance is suggested for the system power with a large voltage spike. The voltage rating of the capacitors must be greater than the maximum input voltage.

To ensure loop stability, the TPL810 series requires an output capacitor with an effective capacitance value of 2.2 μF to 22 μF . 3PEAK recommends selecting an X5R- or X7R-type 4.7 μF ceramic capacitor with low ESR over the temperature range.

Both input capacitors and output capacitors must be placed as close to the device pins as possible.

Power Dissipation

During normal operation, LDO junction temperature should not exceed 125°C. Using the below equations to calculate the power dissipation and estimate the junction temperature.

The power dissipation can be calculated using [Equation 2](#).

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_{GND} \quad (2)$$

**24-V Input, 180-mA Output
High Voltage and Low Quiescent Current LDO**

The junction temperature can be estimated using [Equation 3](#). θ_{JA} is the junction-to-ambient thermal resistance (See Section [Thermal Information](#)).

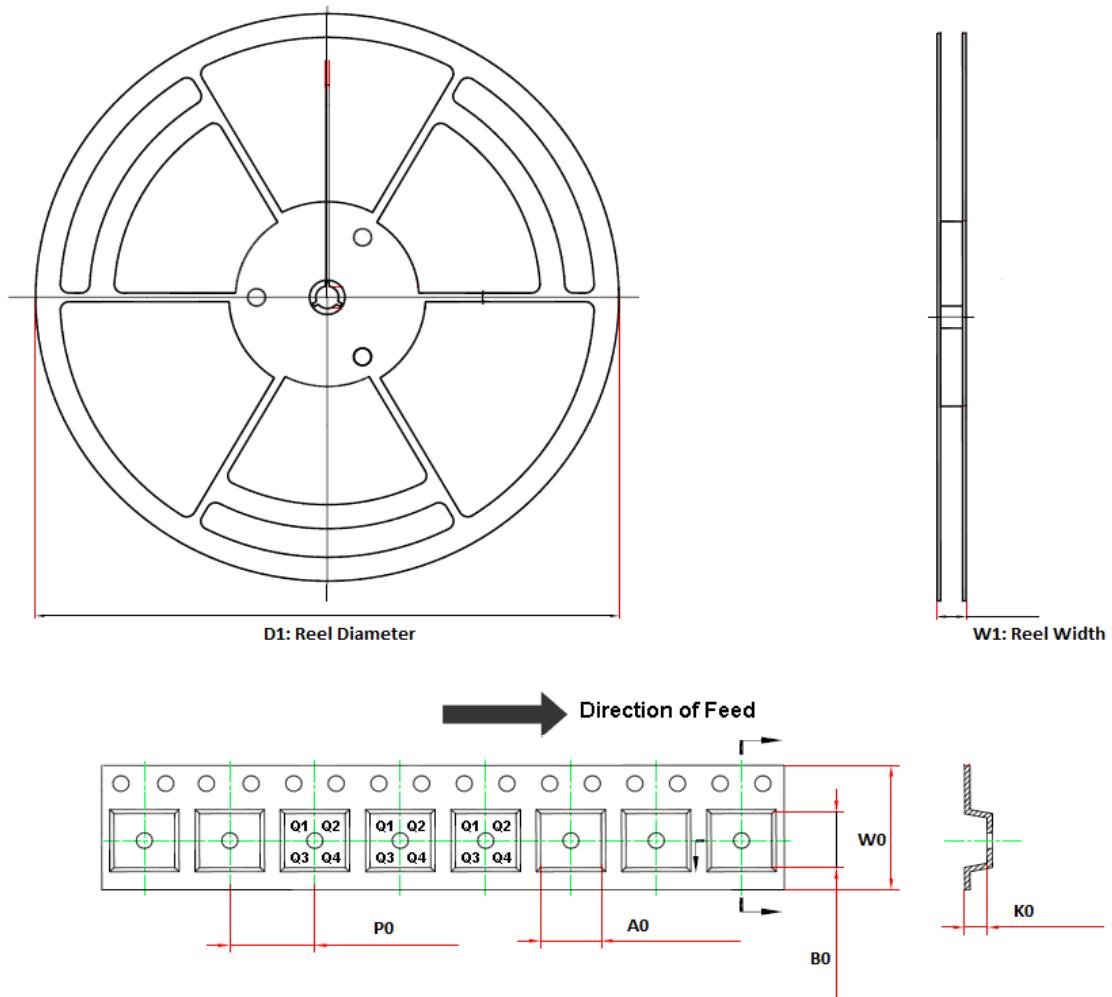

$$T_J = T_A + P_D \times \theta_{JA} \quad (3)$$

Layout

Layout Guideline

- Both input capacitors and output capacitors must be placed as close to the device pins as possible.
- It is recommended to bypass the input pin to ground with a 0.1 μF bypass capacitor. The loop area formed by the bypass capacitor connection, the IN pin, and the GND pin of the system must be as small as possible.
- It is recommended to use wide trace lengths or thick copper weight to minimize $I \times R$ drop and heat dissipation.
