

## SCM9602A Ultra-high Voltage Start-up Controller

### Features

- Ideal for applications requiring an ultra-wide input voltage range (40V<sub>DC</sub> to 700V<sub>DC</sub>)
- Low-cost design featuring large starting current in small physical package

### Package

Mechanical package: SOT-23  
(see "Ordering information" for details).

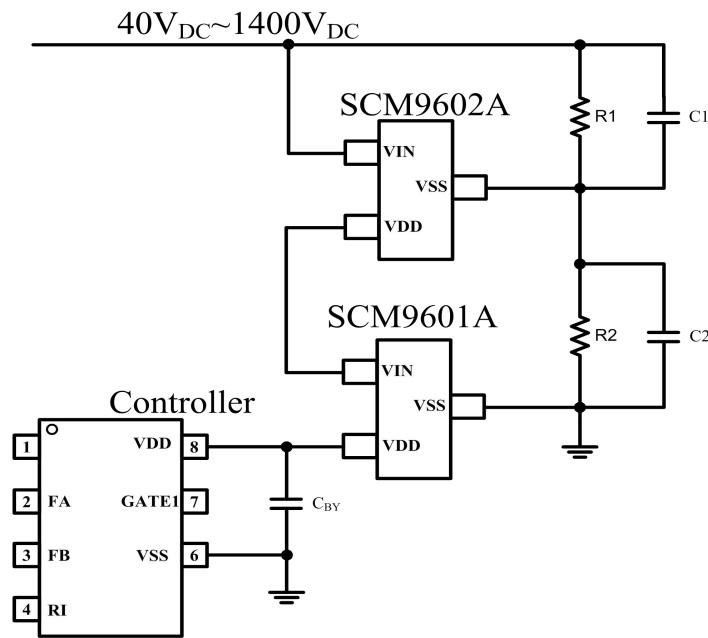

### Applications

- Used for converters with ultra-wide input voltage of 40V<sub>DC</sub> to 700V<sub>DC</sub>.

### Functional Description

The SCM9602A chip can be used to increase the input voltage range from 40V<sub>DC</sub> to 5,000V<sub>DC</sub> when used in combination with our SCM9601A.

### Typical Application Circuit

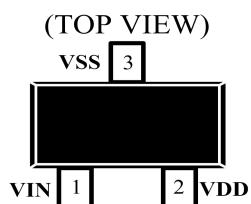

Application shown with an Input Voltage of 40V<sub>DC</sub> to 1400V<sub>DC</sub> where SCM9601A and SCM9602A are combined and connected in series

### Pins

### Internal Block Diagram

### Pin descriptions

Pin No.	Pin name	I/O	Description
1	VIN	P	The high voltage input obtains power from the input voltage and charges the bypass capacitor of the VDD pin to start the controller.
2	VDD	P	Power pin.
3	VSS	P	IC Ground connection.

### Absolute Maximum Ratings

General test conditions: Free-air, normal operating temperature range (unless otherwise specified).

Parameter	Symbol	Min	Max	Unit
Bias mains voltage	$V_{VDD}$		40	V
Voltage at the VIN pin	$V_{VIN}$		700	
Operating junction temperature	$T_J$	-40	150	°C
Storage temperature	$T_{STG}$	-40	150	
Soldering Temperature (Allowable reflow soldering temperature of chip within 10 seconds)			260	
Electrostatic Discharge (ESD) rating	Human body model (HBM)		2000	V
	Charging device model (CDM)		1000	

2020-09-01 正本 orig •

## Recommended Operating Conditions

Parameter	Symbol	Min	Max	Unit
Bias mains voltage	$V_{VDD}$	9	20	V
Operating junction temperature	$T_J$	-40	125	°C

## Electrical Characteristics

Test conditions: Free-air, normal operating temperature range,  $V_{VSS}=0V$  (unless otherwise specified).

Symbol	Parameter	Test condition	Min	Typ	Max	Unit
$V_{BR}$	Breakdown voltage of the VIN pin	$V_{VSS}=-8V$ , $I_{VIN}=10\mu A$ , $V_{VDD}=0V$	700	-	-	V
$V_{TH}$	Threshold voltage	$V_{VIN}=40V$ , $I_{VDD}=1\mu A$	2.7	3.7	4.7	V
$I_{STH}$	Maximum starting current	$V_{VIN}=40V$ , $V_{VDD}=0V$	1	2	4	mA
$I_{DSS}$	Leak current of the leakage source	$V_{VSS}=-8V$ , $V_{VIN}=700V$ , $V_{VDD}=0V$	-	-	2	$\mu A$

## Typical Curve

## Application Circuit

When applying SCM9602A, need to match with our SCM9602A. See Fig. 6 for details. C1 and C2 are high voltage storage capacitors at the input end, reducing the fluctuation amplitude of input voltage; R1, R2 is a voltage equalizing resistor which avoids the uneven voltage caused by the difference of leakage current between C1 and C2; D1, D2 and D3 are in反并联 (anti-parallel) to solve the problem of leakage current difference between C1 and C2.

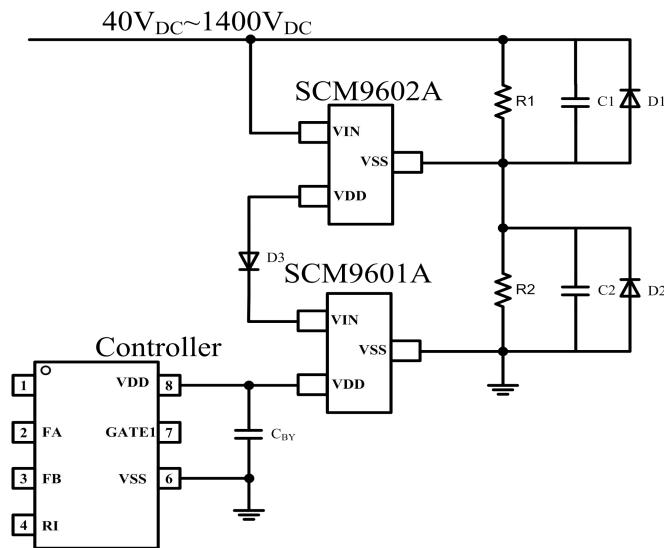

Fig.6 Input 40V<sub>DC</sub>~1400V<sub>DC</sub> Application Circuit (SCM9601A and SCM9602A in Series)

## Suggestions of Power Supply

1. SCM9602A can not be used in high voltage start-up circuit alone. In practical use, it is recommended to match our company SCM9601A, which can be used in ultra-high input voltage situations.
2. When SCM9601A and SCM9602A are used in series, the leakage current difference between capacitors C1 and C2 should be considered.

## Ordering Information

Part number	Package	Number of pins	Product Marking	Tape & Reel
SCM9602ATA	SOT-23	3	9602	3K/REEL

Product marking and date code

SCM9602XYZ:

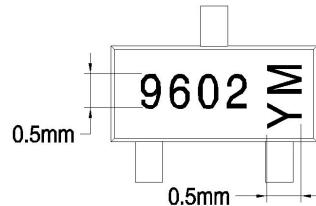

(1) SCM9602 = Product designation.

(2) X = Version code information (A-Z).

(3) Y = Packaging definition code; T for SOT package,

(4) Z = Operating temperature range (C = 0°C to +70°C, I = -40°C to +85°C, A = -40°C to +125°C, M = -55°C to +125°C).
