

Integrated Single Video Amplifier And Video Coaxial Control Decoder

-----MS7332M

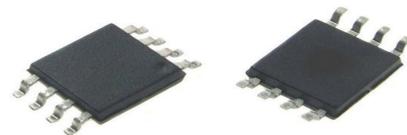

PRODUCT DESCRIPTION

The MS7332M integrated Single video amplifier and video coaxial control decoder. The video amplifier integrates Single rail-to-rail output driver with 6dB Gain and 10th output reconstruction filter, it has 35MHz -3dB bandwidth. The video coaxial control decoder integrated a high-speed processor, effective separation for mixed-signal. Operating from single supplies ranging from +2.7V to +5V and sinking an ultra-low 25mA quiescent current, the MS7332M is ideally suited for battery powered applications.

The MS7332M has lead MSOP-8 package, and ESD (HBM) reaches over 3KV.

FEATURES

- Tenth-order 35MHz (HD) Filter
- Transparent input clamping
- 6dB output driver Gain and drive dual video load
- Rail-to-Rail Output
- Input Voltage Range Includes Ground
- AC or DC Coupled Inputs
- AC or DC Coupled Outputs
- Operates from 2.7V to 5V Single power supply
- Low Power 25mA Supply Current
- Lead MSOP-8 package

MSOP-8

APPLICATIONS

- Video On Demand (VOD)
- Communications device
- Portable and handheld product
- AHD/TVI/CVI video driver and reverse control decoder

ABSOLUTE MAXIMUM RATINGS

Stresses below those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions below those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

PARAMETER	MAXIMUM
Supply Voltage, V+ to V-	7.5V
Input Voltage	GND-0.3V to (+VS)+0.3V
Storage Temperature Range	-65°C to +150°C
Junction Temperature	160°C
Operating Temperature Range	-40°C to +125°C
Power Dissipation, PD @ TA = 25°C	0.8W
Package Thermal Resistance, θ_{JA}	128°C/W
Lead Temperature Range (Soldering 10 sec)	260°C
ESD Susceptibility (HBM)	>3000V

CAUTION

This integrated circuit can be damaged by Static electricity if you don't pay attention to ESD protection. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

APPLICATIONS INFORMATION

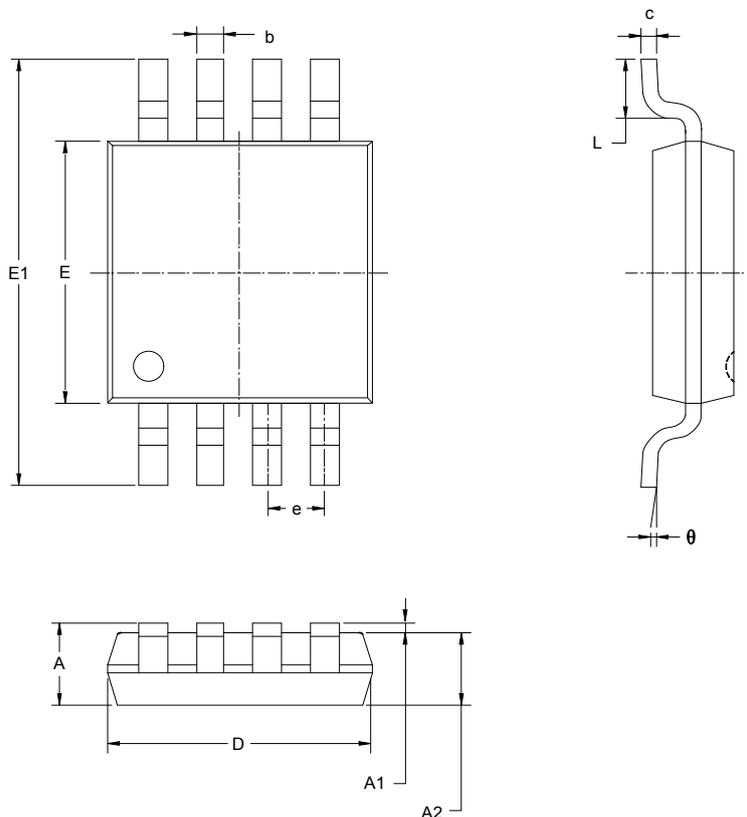

Functional Description

MS7332M operates from a single +2.7V to +5V supply. In application, MS7332M is a fully integrated solution for filtering and buffering HDTV signals in front of video decoder or behind video encoder, and reverse control decoder. MS7332M's solution can help you save PCB size and production cost, it also improves video signal performance comparing with traditional design using discrete components. MS7332M features a DC-coupled input buffer, 10th low-pass filter to eliminate out-of-band noise of video encoder, and a gain of +6dB in the output amplifier to drive 75Ω load. The AC or DC-coupled input buffer eliminates sync crush, droop, and field tilt. The output of MS7332M also can be DC-coupled or AC-coupled.

Power-Supply Bypassing and Layout

Correct power supply bypassing is very important for optimizing video performance in design. both 0.1μF ceramic and 10μF electrolytic capacitors are always used to Bypass VCC pin of MS7332M, please place these two capacitors as close to the MS7332M output pin as possible, a large ground plane is also needed to ensure optimum performance. The input and output termination resistors should be placed as close to the related pin of MS7332M as possible to avoid performance degradation. The PCB traces at the output side should have 75Ω characteristic impedance in order to match the 75Ω characteristic impedance cable connecting external load. In design, please keep the board trace at the inputs and outputs of the MS7332M as short as possible to minimize the parasitic stray capacitance and noise pickup.

0.1μF capacitor is used to stabilize Vref pin of MS7332M.
