

2W x 2 Class AB Audio Power Amplifier

PT2300

DESCRIPTION

The PT2300 is a power amplifier utilizing CMOS Technology specially designed for audio purpose. It can deliver $2W \times 2$ power output to the 4Ω load. The power consumption is very low in stand-by. Total harmonic distortion is lower than 0.03%. The output mode can be switched between the SE (Single-Ended) or BTL (Bridge-Tied Load) mode. The built-in volume controller can change the output volume by an external supplied DC voltage. Built-in over-temperature protection, package size is not occupies PCB space. It is suitable for small or portable products.

FEATURES

- CMOS Technology
- Stereo input
- Output power $2W \times 2$ ($V_{cc}=6V$, THD=1%, $RL=4\Omega$)
- Low harmonics distortion (0.03%)
- Include 32 steps volume controller
- SE and BTL modes operation
- Suppress the pop and click noise when mode changed
- Shutdown function, turn on can into save mode ($I_{cc}<0.7\mu A$)
- Built-in overheating protection

APPLICATIONS

- LCD monitor (for TV)
- Portable audio
- Multimedia speakers
- Other audio applications

BLOCK DIAGRAM

PIN CONFIGURATION

PIN DESCRIPTION

| Pin Name | I/O | Description | Pin No. |
|----------|-----|--|---------|
| Shutdown | I | Shutdown pin. Entire IC into the shutdown mode when this pin connected to the Vcc, | 1 |
| Vcc | | Supply voltage input | 2 |
| DC Vol | I | DC Volume control input pin | 3 |
| Vo1 | I | Channel 1 output for external feedback circuit | 4 |
| Vin1 | I | Channel 1 audio input | 5 |
| Vin2 | I | Channel 2 audio input | 6 |
| Vo2 | I | Channel 2 output for external feedback circuit | 7 |
| GND | | Ground | 8 |
| +OUT2 | O | Channel 2 output (+) | 9 |
| Vcc | | Supply voltage input | |
| -OUT2 | O | Channel 2 output (-) | 11 |
| SE/BTL | I | Output mode select, connected to the Vcc for SE mode or GND for BTL mode | 12 |
| Bypass | O | Internal bias reference bypassing | 13 |
| -OUT1 | O | Channel 1 output (-) | 14 |
| Vcc | O | Supply voltage input | 15 |
| +OUT1 | O | Channel 1 output (+) | 16 |

FUNCTION DESCRIPTION

POWER SUPPLY

The operating voltage of PT2300 is from 3V to 6V, In general operation 5V is recommended. When the supply voltage less than 3V the IC can work properly, but the distortion reading will rise. After the supply voltage over 6.5V, the higher stand-by current consumption will rising the temperature on chip surface.

SHUTDOWN

When the DC supply still powered the chip Vcc, pull-up the shutdown pin to the Vcc level will take the chip into the shutdown mode. After the shutdown mode is active the total current consumption is less than $0.7\mu A$, and the all of input or output pins no voltage output. When shutdown pin set to GND, the IC is back to the normal operation.

| Shutdown pin | Output state |
|--------------|--------------|
| Vcc | Shutdown ON |
| GND | Normal |

INPUT GAIN ADJUST

The output gain of the PT2300 can be adjust by the external resistor, in normal operation 0dB gain setting is recommended, please refer to the application circuit. If the source output level is not so high (ex :< 2Vpp), input gain can be increase to get the proper volume. The minimum value of the input series resistance is $10K\Omega$ for the modest input impedance.

To make sure the input stage will not be distortion by overload, please confirm the input signal level, for the gain set please refer to the following table:

| Operating voltage | Input gain = -6dB | Input gain = 0dB | Input gain = +6dB |
|-------------------|-------------------|------------------|-------------------|
| VDD=3V | Vin <5Vpp | Vin <2.5Vpp | Vin <1.25Vpp |
| VDD=5V | Vin <8Vpp | Vin<4Vpp | Vin<2Vpp |

SE/BTL MODE SWITCHING

PT2300 have two output mode, SE (Single-Ended) or BTL (Bridge-Tied Load). When driving a speaker load suggestion set to the BTL mode for get the more power output. And driving a headphone load, it can be set to SE mode and turn-off the un-work amplifier to decrease stand-by power consumption. Switching between the SE/BTL modes is controlled by the SE/BTL pin, please refer to following table:

| SE/BTL | Mode |
|--------|------|
| Vcc | SE |
| GND | BTL |

2W x 2 Class AB Audio Power Amplifier

PT2300

OVER TEMPERATURE PROTECTION

The PT2300 has a built-in over temperature protection circuit, it will turn off all power output when the chip temperature over 120°C, the chip will return to normal operation automatically after the temperature cool down to 80°C.

POP AND CLICK SURPRESS

A power amplifier uses single supply voltage may almost have noise on output in the power-on period. It is because of the output DC potential needs time to stable on 1/2Vcc, the period relative with the capacitance on the Bypass pin. Higher CB value will extend the stable time, and also can suppress the noise when power-on. In supply voltage=5V and CB=2.2μF, stable time is about 300ms. The value of CB also relative with the value of the DC blocking capacitor connected in input terminal. In general condition the time constant of DC blocking capacitor should be less than CB stable time. Recommend parts values please refer to application circuit.

VOLUME CONTROLLER

The PT2300 has a built-in 32 steps volume controller, output volume is determinate by the voltage applied on the DC Vol pin. Higher DC voltage means more output level, the relation between the volume setup and DC Vol, please refer the following table.

[Supply voltage 5V, DC Vol input voltage showing by percentage of Vcc]

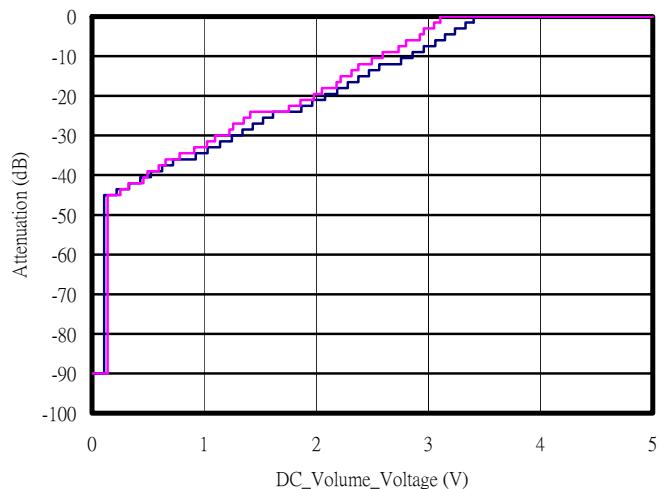

| Step | Volume (dB) | Voltage range (%VCC) | | Step | Volume (dB) | Voltage range (%VCC) | |
|------|-------------|----------------------|------|------|-------------|----------------------|------|
| | | High | Low | | | High | Low |
| 1 | 0 | Vcc | 64.0 | 17 | -24 | 36.0 | 29.7 |
| 2 | -1.5 | 64.1 | 62.6 | 18 | -25.5 | 29.9 | 28.0 |
| 3 | -3 | 63.1 | 60.9 | 19 | -27 | 28.7 | 26.3 |
| 4 | -4.5 | 61.1 | 59.2 | 20 | -28.5 | 26.6 | 24.6 |
| 5 | -6 | 60.4 | 57.6 | 21 | -30 | 26.0 | 22.9 |
| 6 | -7.5 | 57.8 | 55.7 | 22 | -31.5 | 23.2 | 20.9 |
| 7 | -9 | 56.4 | 53.8 | 23 | -33 | 21.8 | 18.9 |
| 8 | -10.5 | 53.8 | 51.3 | 24 | -34.5 | 19.3 | 15.9 |
| 9 | -12 | 52.1 | 48.5 | 25 | -36 | 17.2 | 13.4 |
| 10 | -13.5 | 48.7 | 46.8 | 26 | -37.5 | 13.7 | 11.6 |

| 14 | -19.5 | 41.8 | 39.5 | 30 | -43.5 | 6.7 | 4.2 |
| 15 | -21 | 40.4 | 37.4 | 31 | -45 | 5.2 | 2.1 |
| 16 | -22.5 | 37.8 | 35.4 | 32 | MUTE | 2.7 | GND |

2W x 2 Class AB Audio Power Amplifier

PT2300

If an ordinary potential meter is used to decide the DC_Vol level, the volume setting is just to rotating the shaft knob of potential meter to get desire volume, an extra indicator is not necessary. The output volume is respect to the current DC_Vol level after power ON. Please take note that there is a slight variance between the volume attenuation between different PT2300 chips at the same DC control voltage. Thus, to obtain the same level of volume the control voltage may differ to from chip to chip. Applying the same voltage at the DC_Vol pin, the attenuation drift may vary up to ± 4 dB for different PT2300 chips.

2W x 2 Class AB Audio Power Amplifier

PT2300

HEAT DISSIPATION

During normal operation, the chip only consumes very little stand-by current. In high output power conditions, the package temperature will rise. For proper operating temperature, a modest heat sink mounted on the top side of the chip is required. The thermal resistance requirement of the heat sink demand may be obtained by the formula below:

$$\theta_{JA} = (T_{J(max)} - T_A) \div P_{DISS}$$

PDISS = IC dissipation power

T_J (max) = Maximum chip conjunction temperature

T_A = external environment temperature

θ_{JA} = thermal resistance from chip conjunction to ambience environment

With 60% estimated efficiency (eff), PT2300 in 2W + 2W output power dissipation is probably

$$P_{DISS} = (P_o \div \text{eff}) - P_o = 2.6W$$

The maximum chip conjunction temperature is 150°C. Exceeding this temperature will damage the chip, assuming the outside environment air temperature is 50°C. From the chip conjunction dissipation to external environment thermal resistance θ_{JA} should be:

$$\theta_{JA} = (150 - 50) \div 2.6 = 38.4^\circ\text{C}/\text{W}$$

The PT2300 chip conjunction to case thermal resistance θ_{JC} is 26°C /W. Therefore the heat sink thermal resistance should be:

$$\theta_{JA} - \theta_{JC} = 12.4^\circ\text{C}/\text{W}$$

In normal operating, no need extra heat sink, only utilize the ground (copper foil) of PCB to heat dissipation.

2W x 2 Class AB Audio Power Amplifier

Notes:

1. Controlling Dimension: INCHES.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Dimensions A, A1 and L are measured with the package seated in JEDEC Seating Plane Gauge GS-3.
4. D, D1 and E1 dimensions do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 inch.
5. E and eA measured with the leads constrained to be perpendicular to datum -C-.
6. eB and eA are measured at the lead tips with the leads unconstrained.
7. N is the maximum number of terminal positions (N=16).
8. Pointed or rounded lead tips are preferred to ease insertion.
9. b2 and b3 maximum dimensions do not include dambar protrusions. Dambar protrusions shall not exceed 0.010 (0.25mm).
10. Variation AB is a full lead package.
11. Distance between leads including dambar protrusions to be 0.005 in minimum.
12. Datum plane -H- coincident with the bottom of lead where lead exits body.
13. Refer to JEDEC MS-001 Variation AB.
