

## Dual 5-A High-speed, Low-side Gate Driver

### Features

- Industry-standard Pin Configuration
- Automotive AEC-Q100 Grade 1 Qualified (Refer to TPM27524Q)
- 4.5-V to 23-V Single-Supply Range
- Dual Independent Channels
- 5-A Peak Source and Sink-drive Current
- Independent-enable Function for Each Output
- TTL and CMOS Compatible Threshold
- Outputs Held Low During VDD-UVLO or Input Floating
- Low Propagation Delay (14-ns Typical)
- Fast Rise-and-fall Times (7-ns and 6-ns Typical)
- <1-ns Typical Delay Matching between Two Channels
- Two Outputs Used in Parallel for Higher Drive Current
- ESD Protection Exceeds JESD 22 – 6-kV HBM, 1.5-kV CDM
- Available in SOP8, EMSOP8, DFN3X3-8, and DFN2X2-8 Packages

### Applications

- Switched-mode Power Supplies
- DC-DC Converters
- Motor Control, Solar Inverters
- Gate & IGBT Drive

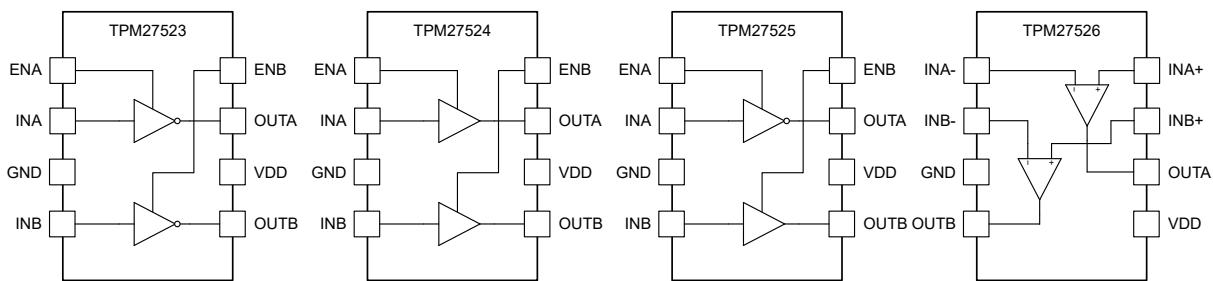

### Description

The TPM2752x family is a series of dual-channel low-side gate drivers for MOSFET, IGBT, and GaN power switches.

High sourcing and sinking current capability of 5 A allows for improving switching efficiencies by minimizing slew time and switching loss. The device supports maximum 25-V supply voltage and -5V DC input voltage capability, which improves system robustness, especially in noisy industrial applications. Ultra-low propagation delay and excellent matching between two channels are designed for applications with tight timing requirements.

The TPM2752x family consists of a set of gate drivers with different polarities, allowing customers to select based on application needs. The wide range of package supports SOP-8, EMSOP-8, and DFN3X3-8, aligning with industrial standard packages. An extra ultra-small DFN2X2-8 assists the design of ultra-compact synchronous rectifiers in power bricks.

## Pin Configuration and Functions

**Table 1. Pin Functions: TPM2752x**

Pin	Name	I/O	Description
1	ENA	Input	Channel A enable input
8	ENB	Input	Channel B enable input
3	GND	Ground	Device ground
2	INA	Input	Logic input. TPM27523: Inverting input; TPM27524: Non-inverting input; TPM27525: Inverting input.
4	INB	Input	Logic input. TPM27523: Inverting input; TPM27524: Non-inverting input; TPM27525: Non-inverting input.
7	OUTA	Output	Channel A output
5	OUTB	Output	Channel B output
6	VDD	Power	Power supply input

**Dual 5-A High-speed, Low-side Gate Driver****Table 2. Pin Functions: TPM27526**

Pin	Name	I/O	Description
1	INA-	Input	Inverting input to channel A. Connect to GND to enable channel A. Output is low if input INA- is unbiased or floating.
2	INB-	Input	Inverting input to channel B. Connect to GND to enable channel B. Output is low if input INB- is unbiased or floating.
3	GND	Ground	Device Ground
4	OUTB	Output	Channel B Output
5	VDD	Power	Power supply
6	OUTA	Output	Channel A Output
7	INB+	Input	Non-inverting input to channel B. Connect to VDD to enable channel B. Output is low if input INB+ is unbiased or floating.
8	INA+	Input	Non-inverting input to channel A. Connect to VDD to enable channel A. Output is low if input INA+ is unbiased or floating.

## Specifications

### Absolute Maximum Ratings (1)

Parameter		Min	Max	Unit
	Power Supply Voltage, VDD	-0.3	25	V
	Output Voltage Range OUTA, OUTB	-0.3	VDD + 0.3	V
		-2	VDD + 0.3 (200-ns pulse)	
	Input Voltage Range INA, INB, INA+, INA-, INB+, INB-, ENA, ENB	-5	20	V
	Continuous Output Channel Current OUTA, OUTB	-300	300	mA
	Pulsed Output Channel Current OUTA, OUTB (500 ns)	-5	5	A
	Operating Junction Temperature Range	-40	150	°C
T <sub>STG</sub>	Storage Temperature Range	-65	150	°C
T <sub>L</sub>	Lead Temperature (Soldering, 10 sec)		260	°C

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.
- (2) The inputs are protected by ESD protection diodes to each power supply. If the input extends more than 300 mV beyond the power supply, the input current should be limited to less than 10 mA.
- (3) Power dissipation and thermal limits must be observed.

### ESD, Electrostatic Discharge Protection

Parameter		Condition	Minimum Level	Unit
HBM	Human Body Model ESD	ANSI/ESDA/JEDEC JS-001 (1)	±6	kV
CDM	Charged Device Model ESD	ANSI/ESDA/JEDEC JS-002 (2)	±1.5	kV

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### Recommended Operating Conditions

Parameter	Min	Max	Unit
Power Supply Voltage, VDD	4.5	23	V
Input Voltage Range INA, INB, INA+, INA-, INB+, INB-, ENA, ENB	0	20	V
Operating Ambient Temperature Range	-40	125	°C

**Dual 5-A High-speed, Low-side Gate Driver****Thermal Information**

Package Type	$\theta_{JA}$	$\theta_{JC}$	Unit
SOP8	122.3	60.4	°C/W
EMSOP8	63.0	42.6	°C/W
DFN3X3-8	75	33	°C/W
DFN2X2-8	55	50	°C/W

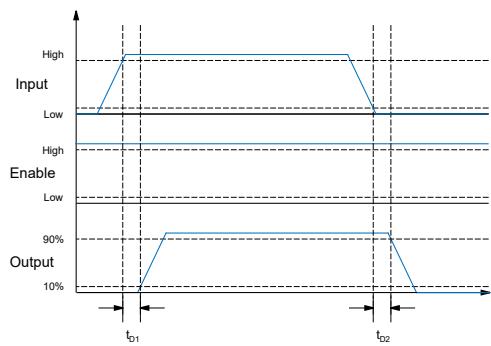

**Dual 5-A High-speed, Low-side Gate Driver**
**Electrical Characteristics**

All test conditions:  $V_{DD} = 12$  V,  $T_J = -40$  °C to 150 °C, and 1- $\mu$ F capacitor between  $V_{DD}$  and GND, unless otherwise noted.

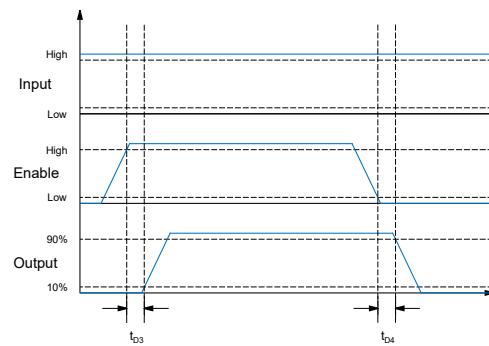

Parameter		Conditions	Min	Typ	Max	Unit
$I_{DD(off)}$	Start-up Current, based on TPM27524 Circuitry	$V_{DD} = 3.4$ V, INA = H, INB = H		40	100	$\mu$ A
		$V_{DD} = 3.4$ V, INA = L, INB = L		40	100	
$V_{ON}$	Supply Under Voltage Lock Out Rising Threshold	$T_J = 25$ °C	3.91	4.2	4.5	V
		$T_J = -40$ °C – 150 °C	3.7	4.2	4.65	
$V_{OFF}$	Supply Under Voltage Lock Out Falling Threshold	$T_J = -40$ °C – 150 °C	3.4	3.9	4.4	V
$V_{DD\_H}$	Supply Under Voltage Lock Out Hysteresis		0.2	0.3	0.5	V
$V_{EN\_H}$	Enable High Threshold	Enable high threshold		1.9	2.3	V
$V_{EN\_L}$	Enable Low Threshold	Enable low threshold	1	1.2		V
$V_{EN\_HYS}$	Enable Hysteresis			0.7		V
$V_{IN\_H}$	Input Signal High Threshold	Input high threshold		1.95	2.3	V
$V_{IN\_L}$	Input Signal Low Threshold	Input low threshold	1	1.25		V
$V_{IN\_HYS}$	Input Hysteresis			0.7		V
$I_{OUT}$	Output Peak Current	$C_{LOAD} = 0.22$ $\mu$ F, $F_{SW} = 1$ kHz		$\pm 5$		A
$V_{DD} - V_{OH}$	Output High Voltage	$I_{OUT} = -10$ mA			40	mV
$V_{OL}$	Output Low Voltage	$I_{OUT} = 10$ mA			10	mV
$R_{OH}$	Output Pull-up Resistance, PMOS Pull-up only	$I_{OUT} = -10$ mA	1	1.6	3	$\Omega$
$R_{OL}$	Output Pull-down Resistance	$I_{OUT} = 10$ mA	0.15	0.5	1	$\Omega$
$t_R$	Output Rise-time	$C_{LOAD} = 1.8$ nF		7	18	ns
$t_F$	Output Fall-time	$C_{LOAD} = 1.8$ nF		6	10	ns
$t_M$	Delay Matching between OUTA and OUTB	INA = INB, OUTA and OUTB measured at 50%		1	4	ns
$t_{PW}$	Minimal Pulse Width			15	25	ns
$t_{D1}$	Input to Output Propagation Delay	$C_{LOAD} = 1.8$ nF, 5-V INx pulse	6	14	23	ns
$t_{D2}$	Input to Output Propagation Delay	$C_{LOAD} = 1.8$ nF, 5-V INx pulse	6	14	23	ns

### Detailed Description

#### Overview

The TPM2752x series of dual-channel low-side gate drivers are designed for high-performance power supplies, motor controls, and inverters. Designed with industrial standard pin-out and package, the TPM2752x accelerates design process. With extended voltage ranges of supply voltage and negative input voltage on inputs, the TPM2752x improves system-level reliability. 5-A strong driving capability improves gate driver efficiency and lowers heat generation, especially in high-frequency switching applications.

#### Functional Block Diagram

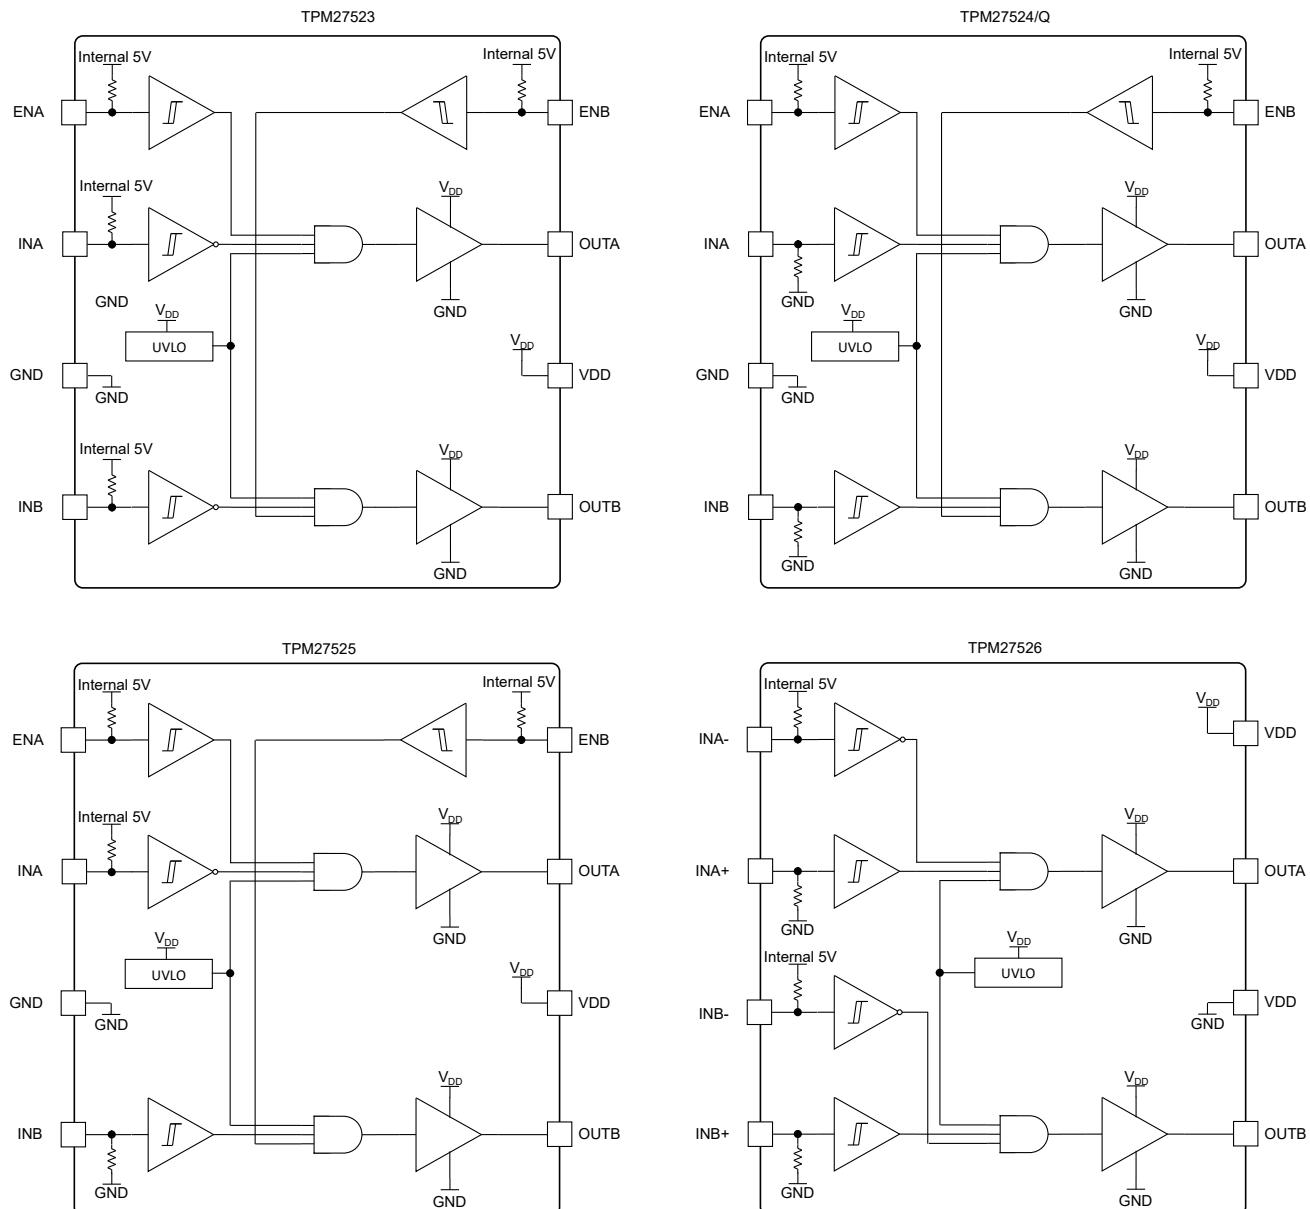

Figure 22. Functional Block Diagram

---

**Dual 5-A High-speed, Low-side Gate Driver**

## Feature Description

### Low Propagation Delay Driver Outputs

The low-propagation-delay design allows the device to achieve industrial leading low propagation delay between inputs and outputs. The low delay enhances driver performance in high-frequency switching regulators. Matching between two channels is optimized to support parallel driving. 3PEAK recommends tying IN1 and IN2 locally together with a high-input slew rate, to avoid shoot-through between the two well-matched channels. Capacitors are not recommended on IN1 and IN2 nodes when used in parallel.

### Supply and UVLO

The device monitors the supply voltage with under-voltage lock-out (UVLO). When the supply voltage is below the UVLO threshold, the outputs are held low in UVLO to avoid glitches during power rising and falling.

The device quiescent current and operating current are measured as shown in Figure 5. The current is related to internal quiescent current consumption as well as the output current. The output current can be calculated using external transistor gate charge times switching frequency  $f_{sw}$ .

### Channel Input

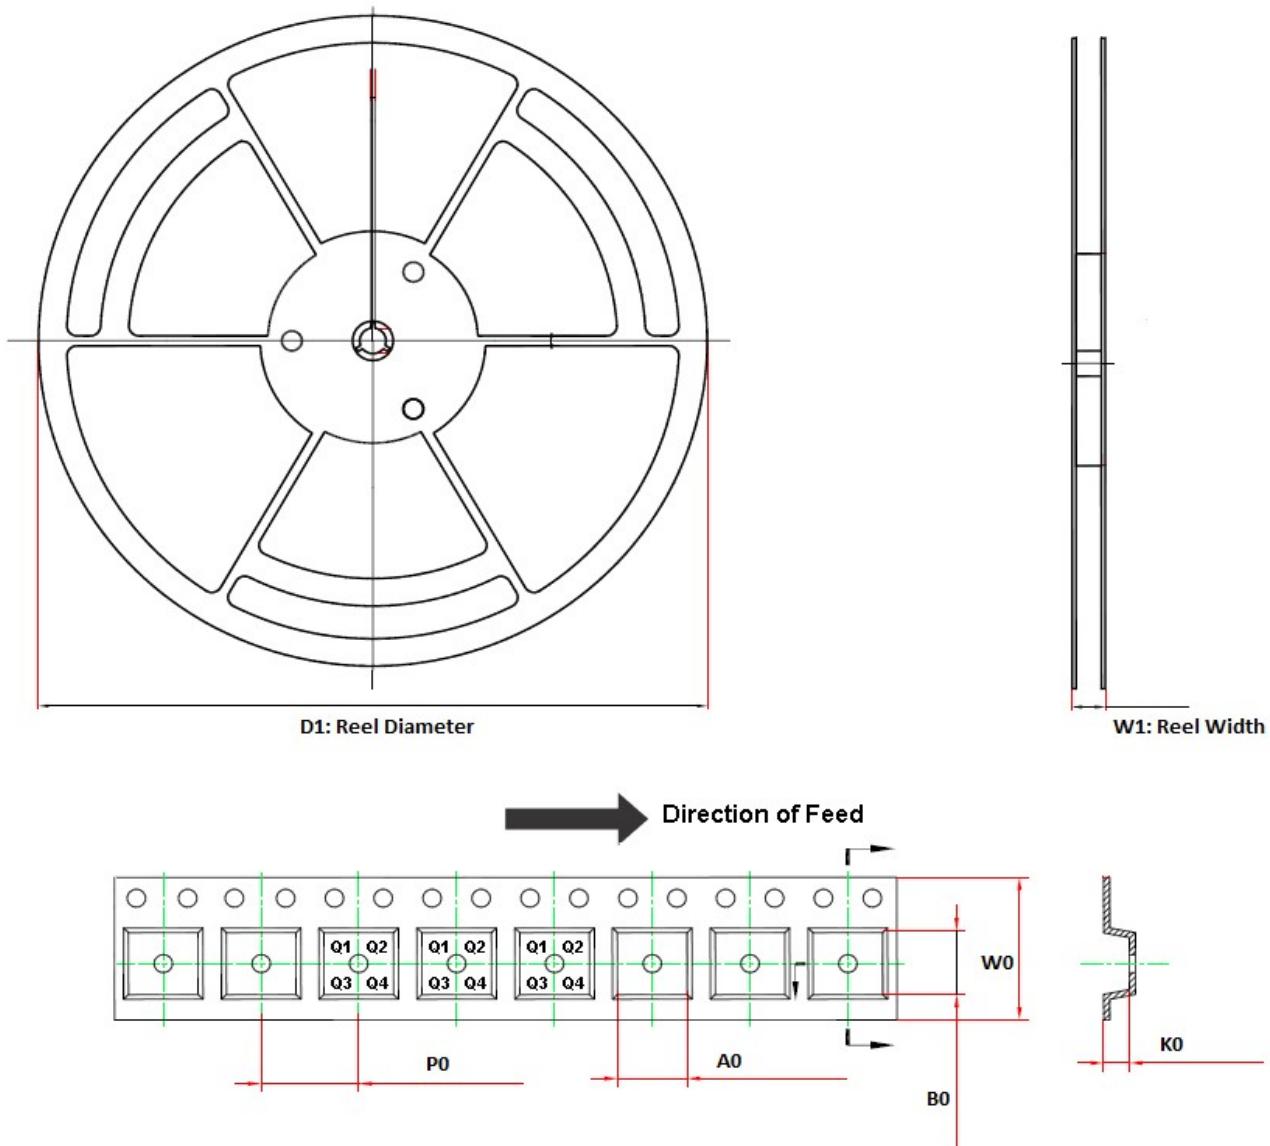

The input of the TPM2752x gate drivers supports TTL and CMOS input with the threshold voltage independent of the supply voltage. The threshold is also designed to support a wide range of ambient temperatures. Wide hysteresis enhances system-level noise immunity. The integrated pull-up and pull-down resistors set the device state when inputs are floating. EN supports NC connection with the help of internal pull-up resistors.

Inputs can withstand DC -5V, to improve robustness on ground bouncing.

### Output Stage

The TPM2752x output stage is able to deliver high current sourcing and sinking up to 5 A with low propagation delay. The delay matching between dual channels is also optimized within 1-ns.

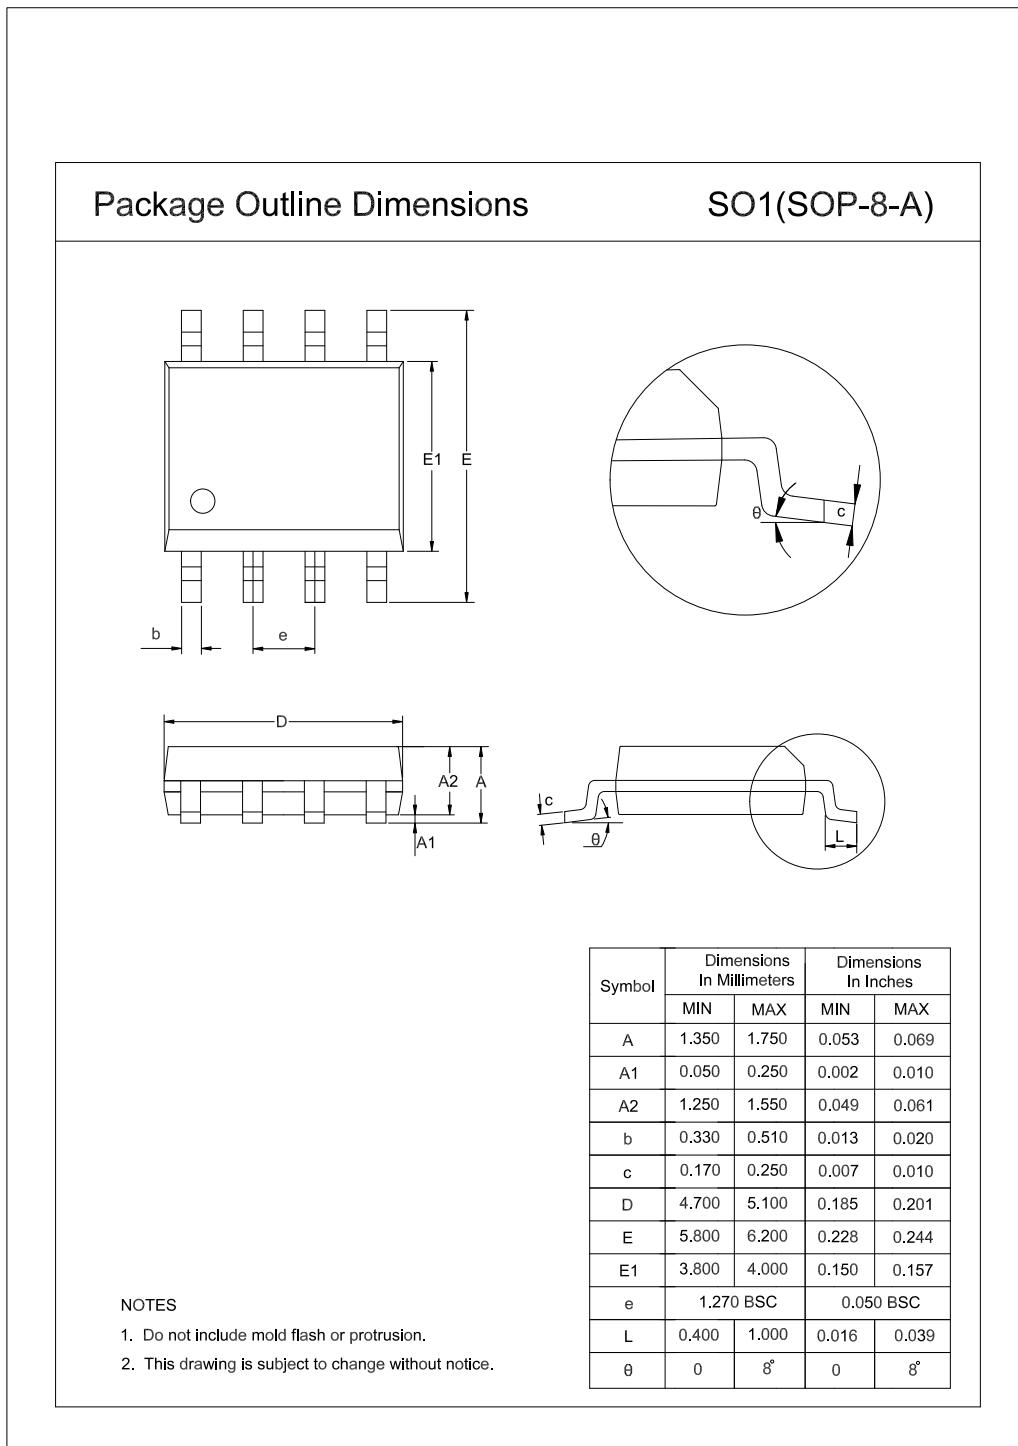

In the case of higher output driving capabilities needed, the TPM2752x can allow paralleling the dual channel to achieve a higher driving current. In this case, it is recommended to use a high slew rate on IN1 and IN2 and connect IN1 and IN2 to avoid shoot through between channels.
