

**42-V Input, 180-mA Output  
High Voltage and Low Quiescent Current LDO****Features**

- Wide Input Voltage Range: 3.6 V to 42 V
- Fixed Output: 2.8 V, 3 V, 3.3 V, and 5 V
- $\pm 1\%$  Output Accuracy Under Room Temperature
- Ultra-Low Quiescent Current: 2  $\mu\text{A}$
- Maximum Output Current: 180 mA
- Low Dropout Voltage: 200 mV at 50 mA
- High PSRR: 73 dB at 100 Hz
- Current Limit and Thermal Protection
- Stable with 2.2  $\mu\text{F}$  to 22  $\mu\text{F}$  Low ESR Ceramic Capacitor
- Soft Start Limits Input Current Surge During Enable
- Thermal Shutdown Protection
- Junction Temperature Range:  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$
- Packages: SOT89-3, SOT23-5, SOT23-3, SOT223-3

**Applications**

- Handheld Devices with Battery Power Supply
- POS and Power Tools
- Meters and Smoke Detector
- Industrial Control
- Wireless and IoT Modules

**Description**

The TPL820 series products are high-performance and low dropout linear regulators. The TPL820 series products support a maximum 42 V input voltage and 180 mA output current with low quiescent current and high PSRR. The TPL820 series products are stable with a 2.2  $\mu\text{F}$  to 22  $\mu\text{F}$  output capacitor, and a 4.7  $\mu\text{F}$  ceramic capacitor is recommended.

The TPL820 series products have a high PSRR with 73 dB at 100 Hz. This feature makes TPL820 series products very suitable for power-sensitive applications with high noise from the previous stage power supply. 2  $\mu\text{A}$  ultra-low quiescent current makes the TPL820 series products ideal choices for portable devices with battery power supply. Current-limit and thermal overload protection circuits improve the reliability under heavy load conditions.

The TPL820 series products provide fixed output voltage options from 2.8 V to 5 V with  $\pm 2\%$  voltage accuracy over operating conditions. The TPL820 series products are guaranteed over the junction temperature range from  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ .

## 42-V Input, 180-mA Output High Voltage and Low Quiescent Current LDO

### Specifications

#### Absolute Maximum Ratings<sup>(1)</sup>

| Parameter        |                                     | Min  | Max | Unit |
|------------------|-------------------------------------|------|-----|------|
| V <sub>IN</sub>  | Maximum Input Voltage               | -0.3 | 45  | V    |
| V <sub>OUT</sub> | Maximum Output Voltage              | -0.3 | 6   | V    |
| P <sub>D</sub>   | Maximum Operating Power Dissipation |      | 1.5 | W    |
| T <sub>J</sub>   | Junction Temperature Range          | -40  | 150 | °C   |
| T <sub>STG</sub> | Storage Temperature Range           | -65  | 150 | °C   |
| T <sub>L</sub>   | Lead Temperature (Soldering 10 sec) |      | 260 | °C   |

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

(2) All voltage values are with respect to GND.

#### ESD, Electrostatic Discharge Protection

| Symbol | Parameter                | Condition                             | Minimum Level | Unit |
|--------|--------------------------|---------------------------------------|---------------|------|
| HBM    | Human Body Model ESD     | ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup> | ±2.5          | kV   |
| CDM    | Charged Device Model ESD | ANSI/ESDA/JEDEC JS-002 <sup>(2)</sup> | ±2            | kV   |

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

#### Recommended Operating Conditions

| Parameter        |                                      | Min | Max  | Unit |
|------------------|--------------------------------------|-----|------|------|
| V <sub>IN</sub>  | Input Voltage                        | 3.6 | 42   | V    |
| V <sub>OUT</sub> | Output Voltage                       | 1.2 | 5    | V    |
| I <sub>OUT</sub> | Output Current                       | 0   | 180  | mA   |
| T <sub>J</sub>   | Operating Junction Temperature Range | -40 | 125  | °C   |
| P <sub>D</sub>   | Power Dissipation (SOT89-3 Package)  | 0   | 1000 | mW   |
|                  | Power Dissipation (SOT23-5 Package)  | 0   | 300  | mW   |
|                  | Power Dissipation (SOT23-3 Package)  | 0   | 300  | mW   |
|                  | Power Dissipation (SOT223-3 Package) | 0   |      | mW   |

#### Thermal Information

| Package Type | θ <sub>JA</sub> | θ <sub>JC</sub> | Unit |
|--------------|-----------------|-----------------|------|
| SOT89-3      | 63.0            | 9.41            | °C/W |
| SOT23-5      | 280             | 62              | °C/W |
| SOT23-3      | 280             | 62              | °C/W |
| SOT223-3     | 65              | 39              | °C/W |

(1) Dropout voltage is the minimum input to output voltage differential needed to maintain regulation at a specified output current. In dropout, the output voltage will be equal to  $V_{IN} - V_{DO}$ .

(2) Measured with  $V_{IN} = V_{OUT} + 2.5\text{ V}$ .

**42-V Input, 180-mA Output  
High Voltage and Low Quiescent Current LDO****Detailed Description****Overview**

The TPL820 series products are 180-mA wide input range linear regulators with a very low quiescent current. These voltage regulators operate from 3.6 V to 42 V and consume 2  $\mu$ A of quiescent current at no load.

The TPL820 series products are available in fixed output voltage versions of 2.8 V, 3 V, 3.3 V, and 5 V with  $\pm 2\%$  output voltage accuracy over operating conditions.

**Functional Block Diagram**

Figure 11. TPL820 Series

**Feature Description****Under-Voltage Lockout (UVLO)**

The TPL820 series uses an under-voltage lock-out circuit (UVLO = 2.9 V) to keep the output shut off until the internal circuitry operates properly.

**Regulated Output Voltage**

The TPL820 series products are available in fixed voltage versions of 2.8 V, 3 V, 3.3 V, and 5 V. When the input voltage is higher than  $V_{OUT(NOM)} + V_{DO}$  or 3.6 V, the output pin is the regulated output based on the selected voltage version. When the input voltage falls below  $V_{OUT(NOM)} + V_{DO}$  or 3.6 V, the output pin tracks the input voltage minus the dropout voltage based on the load current. When the input voltage drops below the UVLO threshold, the output keeps shutting off.

**Current Limit**

The TPL820 series integrates an internal current limit that helps to protect the regulator during fault conditions. The output voltage is not regulated when the device is in the current limit mode and is  $V_{OUT} = I_{CL} \times R_{LOAD}$ .

**Thermal Shutdown**

During normal operation, LDO junction temperature should not exceed 125°C. When the junction temperature exceeds the thermal shutdown threshold, the LDO shuts down the output immediately. When the junction temperature falls below the thermal shutdown threshold minus thermal shutdown hysteresis, the output turns on again.

## 42-V Input, 180-mA Output High Voltage and Low Quiescent Current LDO

### Application and Implementation

#### NOTE

Information in the following applications sections is not part of the 3PEAK's component specification and 3PEAK does not warrant its accuracy or completeness. 3PEAK's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### Application Information

The TPL820 series products are 42-V 180-mA wide input range linear regulators with a very low quiescent current. The following application schematic shows a typical usage of the TPL820 series.

### Typical Application

Figure 12 shows the typical application schematic of the TPL820 series.

**Figure 12. TPL820 Typical Application**

### Input Capacitor and Output Capacitor

3PEAK recommends adding a 2.2  $\mu\text{F}$  or greater capacitor with a 0.1  $\mu\text{F}$  bypass capacitor in parallel at IN pin to keep the input voltage stable. An aluminum electrolytic capacitor or other capacitors with high capacitance is suggested for the system power with a large voltage spike. The voltage rating of the capacitors must be greater than the maximum input voltage.

To ensure loop stability, the TPL820 series requires an output capacitor with an effective capacitance value of 2.2  $\mu\text{F}$  to 22  $\mu\text{F}$ . 3PEAK recommends selecting an X5R- or X7R-type 4.7  $\mu\text{F}$  ceramic capacitor with low ESR over the temperature range.

Both input capacitors and output capacitors must be placed as close to the device pins as possible.

### Power Dissipation

During normal operation, LDO junction temperature should not exceed 125°C. Use the equations below to calculate the power dissipation and estimate the junction temperature.

The power dissipation can be calculated using [Equation 1](#).

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_{GND} \quad (1)$$

The junction temperature can be estimated using [Equation 2](#).  $\theta_{JA}$  is the junction-to-ambient thermal resistance

**42-V Input, 180-mA Output  
High Voltage and Low Quiescent Current LDO**

(See Section [Thermal Information](#)).

$$T_J = T_A + P_D \times \theta_{JA} \quad (2)$$

## Layout

### Layout Guideline

- Both input capacitors and output capacitors must be placed as close to the device pins as possible.
- It is recommended to bypass the input pin to ground with a 0.1  $\mu$ F bypass capacitor. The loop area formed by the bypass capacitor connection, the IN pin, and the GND pin of the system must be as small as possible.
- It is recommended to use wide trace lengths or thick copper weight to minimize I×R drop and heat dissipation.
