ADVANCED UNIVERSAL SERIAL BUS TRANSCEIVERS

Check for Samples: TUSB1105, TUSB1106

FEATURES

- **Compatible With Universal Serial Bus Specification Rev. 2.0**
- **Transmit and Receive Serial Data at Both Full-Speed (12-Mbit/s) and Low-Speed (1.5-Mbit/s) Data Rates**
- **Integrated Bypassable 5-V to 3.3-V Voltage Regulator for Powering Via USB V_{BUS}**
- **V_{BUS} Disconnection Indication Through V_P and V_M**
- **Used as USB Device Transceiver or USB Host Transceiver**
- **Stable RCV Output During SE0 Condition**
- **Two Single-Ended Receivers With Hysteresis**
- **Low-Power Operation, Ideal for Portable Equipment**
- **Support I/O Voltage Range From 1.65 V to 3.6 V**
- **IEC-61000-4-2 ESD Compliant**
  - **±9-kV Contact-Discharge Model ($D+$, $D-$, $V_{CC(5.0)}$)**
  - **±15-kV Human-Body Model ($D+$, $D-$, $V_{CC(5.0)}$)**
- **TUSB1105 Available in Quad Flat No-Lead (QFN) Package; TUSB1106 Available in QFN and Thin Shrink Small-Outline Package (TSSOP)**

APPLICATIONS

- **Mobile Phones**
- **Personal Digital Assistants (PDAs)**
- **Information Appliances (IAs)**
- **Digital Still Cameras (DSCs)**

DESCRIPTION/ORDERING INFORMATION

The TUSB1105 and TUSB1106 universal serial bus (USB) transceivers are compliant with the Universal Serial Bus Specification Rev. 2.0. These devices can transmit and receive serial data at both full-speed (12-Mbit/s) and low-speed (1.5-Mbit/s) data rates. The TUSB1105 and TUSB1106 can be used as USB device transceivers or USB host transceivers.

The devices allow USB application-specific ICs (ASICs) and programmable logic devices (PLDs), with power-supply voltages from 1.65 V to 3.6 V, to interface with the physical layer (PHY) of the universal serial bus. They have an integrated 5-V to 3.3-V voltage regulator for direct powering via the USB supply VBUS.

The TUSB1105 allows single-ended and differential input modes selectable by a mode (MODE) input and is available in RGT and RTZ packages. The TUSB1106 allows only differential input mode and is available in PW, RGT, RSV, and RTZ packages.

The TUSB1105 and TUSB1106 are ideal for portable electronic devices, such as mobile phones, personal digital assistants, information appliances, and digital still cameras.

ORDERING INFORMATION

T_A	PACKAGE(1) (2)		ORDERABLE PART NUMBER	TOP-SIDE MARKING
–40°C to 85°C	QFN – RGT	Reel of 3000	TUSB1105RGTR	ZYB
			TUSB1106RGTR	ZYC
	QFN – RTZ	Reel of 3000	TUSB1105RTZR	ZYB
			TUSB1106RTZR	ZYC
	QFN – RSV	Reel of 3000	TUSB1106RSVR	ZYC
	TSSOP – PW	Reel of 2000	TUSB1106PWR	TU1106

(1) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.

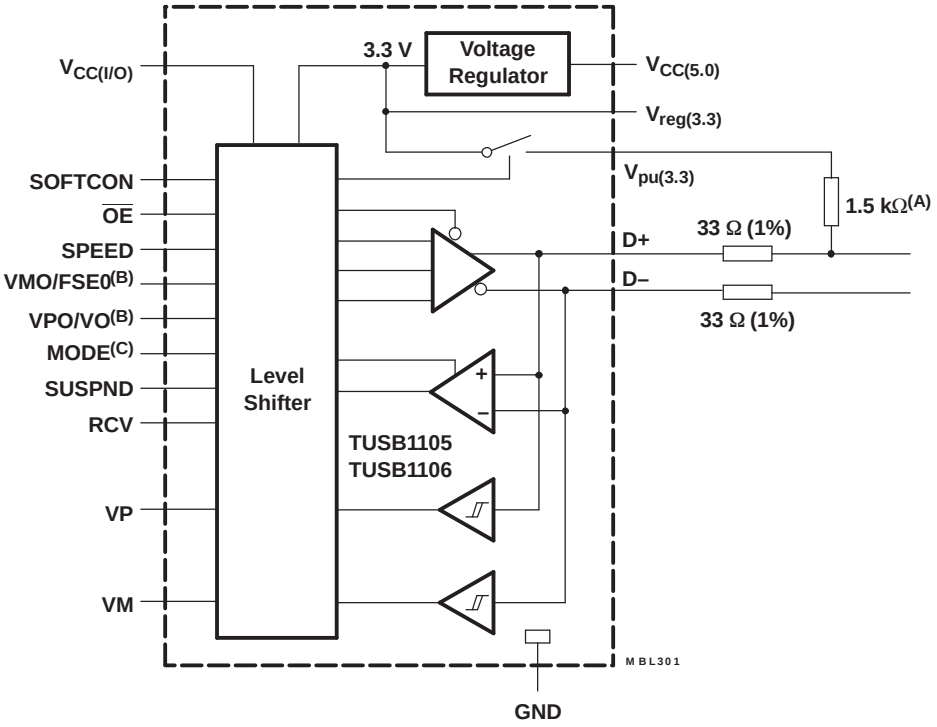
FUNCTIONAL BLOCK DIAGRAM



A. Connect to D– for low-speed operation and to D+ for high-speed operation.

B. Pin function depends on device type.

C. TUSB1105 only

Table 1. TERMINAL FUNCTIONS

TERMINAL					I/O	DESCRIPTION
NAME(1)	TUSB1105 PIN NO.		TUSB1106 PIN NO.			
	RGT	RTZ	PW	RTZ		
$\overline{OE}$	1	1	3	1	I	Output enable (CMOS level with respect to $V_{CC(I/O)}$, active LOW). Enables the transceiver to transmit data on the USB bus input pad. Push pull, CMOS.
RCV	2	2	4	2	O	Differential data receiver (CMOS level with respect to $V_{CC(I/O)}$). Driven LOW when input SUSPND is HIGH. The output state of RCV is preserved and stable during an SE0 condition output pad. Push pull, 4-mA output drive, CMOS.
VP	3	3	5	3	O	Single-ended D+ receiver (CMOS level with respect to V). For external detection of single-ended zero (SE0), error conditions, speed of connected device. Driven HIGH when no supply voltage is connected to $V_{CC(5.0)}$ and $V_{reg(3.3)}$ output pad. Push pull, 4-mA output drive, CMOS.
VM	4	4	6	4	O	Single-ended D– receiver (CMOS level with respect to $V_{CC(I/O)}$). For external detection of single-ended zero (SE0), error conditions, speed of connected device. Driven HIGH when no supply voltage is connected to $V_{CC(5.0)}$ and $V_{reg(3.3)}$ output pad. Push pull, 4-mA output drive, CMOS.
SUSPND	5	5	7	5	I	Suspend (CMOS level with respect to $V_{CC(I/O)}$). A HIGH level enables low-power state while the USB bus is inactive and drives output RCV to a LOW-level input pad. Push pull, CMOS.
MODE	6	6			I	Mode (CMOS level with respect to $V_{CC(I/O)}$). A HIGH level enables the differential input mode (VPO, VMO), whereas a LOW level enables a single-ended input mode (VO, FSE0). See Table 5 and Table 6 input pad. Push pull, CMOS.

(1) Terminal names with an overscore (e.g., $\overline{NAME}$) indicate active LOW signals.

Table 1. TERMINAL FUNCTIONS (continued)

TERMINAL					I/O	DESCRIPTION
NAME[1]	TUSB1105 PIN NO.		TUSB1106 PIN NO.			
	RGT	RTZ	PW	RTZ		
GND	Die pad	Die pad	8	6		Ground supply[2]
$V_{CC(I/O)}$	7	7	9	7		Supply voltage for digital I/O pins (1.65 to 3.6 V). When $V_{CC(I/O)}$ is not connected, the D+ and D– pins are in 3-state. This supply pin is independent of $V_{CC(5.0)}$ and $V_{reg(3.3)}$ and must never exceed the $V_{reg(3.3)}$ voltage.
SPEED	8	8	10	8	I	Speed selection (CMOS level with respect to $V_{CC(I/O)}$). Adjusts the slew rate of differential data outputs D+ and D– according to the transmission speed. Input pad, push pull, CMOS. LOW – low speed (1.5 Mbit/s) HIGH – full speed (12 Mbit/s)
D–	9	9	11	9	AI/O	Negative USB data bus connection (analog, differential). For low-speed mode, connect to pin $V_{pu(3.3)}$ via a 1.5-kΩ resistor.
D+	10	10	12	10	AI/O	Positive USB data bus connection (analog, differential). For full-speed mode, connect to pin $V_{pu(3.3)}$ via a 1.5-kΩ resistor.
VPO/VO	11	11			I	Driver data (CMOS level with respect to $V_{CC(I/O)}$, Schmitt trigger). See Driving Function Table (pin $\overline{OE}$ = L) using single-ended input data interface for TUSB1105 (pin MODE = L), and Driving Function Table (pin $\overline{OE}$ = L) using differential input data interface for TUSB1105 (pin MODE = H) and TUSB1106 input pad. Push pull, CMOS.
VPO			13	11		
VMO/FSE0	12	12			I	Driver data (CMOS level with respect to $V_{CC(I/O)}$, Schmitt trigger). See Driving Function Table (pin $\overline{OE}$ = L) using single-ended input data interface for TUSB1105 (pin MODE = L), and Driving Function Table (pin $\overline{OE}$ = L) using differential input data interface for TUSB1105 (pin MODE = H) and TUSB1106 input pad. Push pull, CMOS.
VMO			14	12		
$V_{reg(3.3)}$	13	13	15	13		Internal regulator option. Regulated supply-voltage output (3 V to 3.6 V) during 5-V operation. A decoupling capacitor of at least 0.1 mF is required for the regulator bypass option. Used as a supply-voltage input for 3.3 V ± 10% operation.
$V_{CC(5.0)}$	14	14	16	14		Internal regulator option. Supply-voltage input (4 V to 5.5 V). Can be connected directly to USB supply VBUS regulator bypass option. Connect to $V_{reg(3.3)}$.
$V_{pu(3.3)}$	15	15	1	15		Pullup supply voltage (3.3 V ± 10%). Connect an external 1.5-kΩ resistor on D+ (full speed) or D– (low speed). Pin function is controlled by input SOFTCON. SOFTCON = LOW – $V_{pu(3.3)}$ floating (high impedance), ensures zero pullup current SOFTCON = HIGH – $V_{pu(3.3)}$ = 3.3 V, internally connected to $V_{reg(3.3)}$
SOFTCON	16	16	2	16	I	Software-controlled USB connection. A HIGH level applies 3.3 V to pin $V_{pu(3.3)}$, which is connected to an external 1.5-kΩ pullup resistor. This allows USB connect/disconnect signaling to be controlled by software input pad. Push pull, CMOS.

(2) TUSB1105 ground terminal is connected to the exposed die pad (heat sink). The package die pad is open on the TUSB1106.

FUNCTIONAL DESCRIPTION

Function Selection

Table 2. FUNCTION TABLE

SUSPND	$\overline{OE}$	D+, D–	RCV	VP, VM	FUNCTION
L	L	Driving and receiving	Active	Active	Normal driving (differential receiver active)
L	H	Receiving(1)	Active	Active	Receiving
H	L	Driving	Inactive(2)	Active	Driving during suspend(3) (differential receiver inactive)
H	H	High-Z(1)	Inactive(2)	Active	Low-power state

(1) Signal levels on D+ and D– are determined by other USB devices and external pullup/pulldown resistors.
(2) In suspend mode (SUSPND = HIGH) the differential receiver is inactive and output RCV is always LOW. Out of suspend (K), signaling is detected via the single-ended receivers VP and VM.
(3) During suspend, the slew-rate control circuit of low-speed operation is disabled. The D+ and D– lines are still driven to their intended states, without slew-rate control. This is permitted because driving during suspend is used to signal remote wakeup by driving a K signal (one transition from idle to K state) for a period of 1 ms to 15 ms.

Operating Functions

Table 3. FUNCTION TABLES

**Driving Function (Pin $\overline{OE}$ = L)
Using Single-Ended Input Data Interface
for TUSB1105 (Pin MODE = L)**

FSE0	VO	DATA	DATA STATE	
			LOW SPEED	FULL SPEED
L	L	Differential logic 0	J	K
L	H	Differential logic 1	K	J
H	L	SE0	X	X
H	H	SE0	X	X

**Table 4. Driving Function (Pin $\overline{OE}$ = L)
Using Differential Input Data Interface
for TUSB1105 (Pin MODE = H) and TUSB1106**

VMO	VPO	DATA	DATA STATE	
			LOW SPEED	FULL SPEED
L	L	SE0	X	X
H	L	Differential logic 0	J	K
L	H	Differential logic 1	K	J
H	H	Illegal state	X	X

Table 5. Receiving Function (Pin $\overline{OE}$ = H)

D+, D–	RCV	VP(1)	VM(1)	DATA STATE	
				LOW SPEED	FULL SPEED
Differential logic 0	L	L	H	J	K
Differential logic 1	H	H	L	K	J
SE0	RCV*(2)	L	L	X	X

(1) VP = VM = H indicates the sharing mode ($V_{CC(5.0)}$ and $V_{reg(3.3)}$ are disconnected).
(2) RCV* denotes the signal level on output RCV just before SE0 state occurs. This level is stable during the SE0 period.

Power-Supply Configurations

The TUSB1105/1106 can be used with different power-supply configurations, which can be dynamically changed. An overview is given in Table 7.

- Normal mode – Both $V_{CC(I/O)}$ and $V_{CC(5.0)}$ or ($V_{CC(5.0)}$ and $V_{reg(3.3)}$) are connected. For 5-V operation, $V_{CC(5.0)}$ is connected to a 5-V source (4 V to 5.5 V). The internal voltage regulator then produces 3.3 V for the USB connections. For 3.3-V operation, both $V_{CC(5.0)}$ and $V_{reg(3.3)}$ are connected to a 3.3-V source (3 V to 3.6 V). $V_{CC(I/O)}$ is independently connected to a voltage source (1.65 V to 3.6 V), depending on the supply voltage of the external circuit.
- Disable mode – $V_{CC(I/O)}$ is not connected, $V_{CC(5.0)}$ or ($V_{CC(5.0)}$ and $V_{reg(3.3)}$) are connected. In this mode, the internal circuits of the TUSB1105 and TUSB1106 ensure that the D+ and D– pins are in 3-state and the power consumption drops to the low-power (suspended) state level. Some hysteresis is built into the detection of $V_{CC(I/O)}$ lost.
- Sharing mode – $V_{CC(I/O)}$ is connected, ($V_{CC(5.0)}$ and $V_{reg(3.3)}$) are not connected. In this mode, the D+ and D– pins are made 3-state and the TUSB1105 and TUSB1106 allow external signals of up to 3.6 V to share the D+ and D– lines. The internal circuits of the TUSB1105 and TUSB1106 ensure that virtually no current (maximum 10 μA) is drawn via the D+ and D– lines. The power consumption through $V_{CC(I/O)}$ drops to the low-power (suspended) state level. Both the VP and VM pins are driven HIGH to indicate this mode. Pin RCV is made LOW. Some hysteresis is built into the detection of $V_{reg(3.3)}$ lost.

Table 6. Pin States in Disable or Sharing Mode

PINS	DISABLE-MODE STATE	SHARING-MODE STATE
$V_{CC(5.0)}/V_{reg(3.3)}$	5-V input/3.3-V output, 3.3-V input/3.3-V input	Not present
$V_{CC(I/O)}$	Not present	1.65-V to 3.6-V input
$V_{pu(3.3)}$	High impedance (off)	High impedance (off)
D+, D–	High impedance	High impedance
VP, VM	Invalid(1)	H
RCV	Invalid(1)	L
Inputs (VO/VPO, FSE0/VMO, SPEED, MODE(2), SUSPND, $\overline{OE}$, SOFTCON)	High impedance	High impedance

(1) High impedance or driven LOW
(2) TUSB1105 only

Table 7. Power-Supply Configuration Overview

$V_{CC(5.0)}$ or $V_{reg(3.3)}$	$V_{CC(I/O)}$	CONFIGURATION	SPECIAL CHARACTERISTICS
Connected	Connected	Normal mode	
Connected	Not connected	Disable mode	D+, D–, and $V_{pu(3.3)}$ are in high impedance. VP, VM, and RCV are invalid.(1)
Not connected	Connected	Sharing mode	D+, D–, and $V_{pu(3.3)}$ are in high impedance. VP and VM are driven HIGH. RCV is driven LOW.

(1) High impedance or driven LOW

Power-Supply Input Options

The TUSB1105 and TUSB1106 have two power-supply input options.

- Internal regulator – $V_{CC(5.0)}$ is connected to 4 V to 5.5 V. The internal regulator is used to supply the internal circuitry with 3.3 V (nominal). $V_{reg(3.3)}$ becomes a 3.3-V output reference.
- Regulator bypass – $V_{CC(5.0)}$ and $V_{reg(3.3)}$ are connected to the same supply. The internal regulator is bypassed and the internal circuitry is supplied directly from the $V_{reg(3.3)}$ power supply. The voltage range is 3 V to 3.6 V to comply with the USB specification.

The supply-voltage range for each input option is specified in Table 8.

Table 8. Power-Supply Input Options

INPUT OPTION	$V_{CC(5.0)}$	$V_{REG(3.3)}$	$V_{CC(I/O)}$
Internal regulator	Supply input for internal regulator (4 V to 5.5 V)	Voltage-reference output (3.3 V, 300 μA)	Supply input for digital I/O pins (1.65 V to 3.6 V)
Regulator bypass	Connected to $V_{reg(3.3)}$ with maximum voltage drop of 0.3 V (2.7 V to 3.6 V)	Supply input (3 V to 3.6 V)	Supply input for digital I/O pins (1.65 V to 3.6 V)

Electrostatic Discharge (ESD)

PARAMETER	TEST CONDITIONS	TYP	UNIT
D+, D–, $V_{CC(5.0)}$, and GND	Human-Body Model	±15	kV
	IEC-61000-4-2, Contact Discharge	±8	
All other pins	Human-Body Model	7	kV

Absolute Maximum Ratings(1)

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
$V_{CC(5.0)}$	Supply voltage range		–0.5	6	V
$V_{I(I/O)}$	Supply voltage range		–0.5	4.6	V
$V_{CCreg(3.3)}$	Regulated voltage range		–0.5	4.6	V
V_I	DC input voltage		–0.5	$V_{CC(I/O)}$ + 0.5	V
I_{IK}	Input clamp current	V_I = –1.8 V to 5.4 V		100	mA
T_{stg}	Storage temperature range		–40	125	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Recommended Operating Conditions

			MIN	NOM	MAX	UNIT
$V_{CC(5.0)}$	Supply voltage, internal regulator option	5-V operation	4	5	5.5	V
$V_{CCreg(3.3)}$	Supply voltage, regulator bypass option	3.3-V operation	3	3.3	3.6	V
$V_{CC(I/O)}$	I/O supply voltage		1.65		3.6	V
V_I	I/O supply voltage		0		$V_{CC(I/O)}$	V
$V_{I/O}$	Input voltage on analog I/O pins (D+, D–)		0		3.6	V
T_c	Junction temperature		–40		85	°C

Static Electrical Characteristics – Supply Pins

over recommended ranges of operating free-air temperature and supply voltage (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
$V_{reg(3.3)}$	Regulated supply-voltage output	Internal regulator option, $I_{load} \le 300\ \mu A$ (1) (2)		3	3.3	3.6	V
I_{CC}	Operating supply current	Full-speed transmitting and receiving at 12 Mbit/s, C_L = 50 pF on D+ and D– (3)			6	8	mA
$I_{CC(I/O)}$	Operating I/O supply current	Full-speed transmitting and receiving at 12 Mbit/s (3)			2.3	2.5	mA
$I_{CC(idle)}$	Supply current during full-speed idle and SE0	Full-speed idle: $V_{D+} > 2.7$ V, $V_{D-} < 0.3$ V SE0: $V_{D+} < 0.3$ V, $V_{D-} < 0.3$ V (4)				500	µA
$I_{CC(I/O)(static)}$	Static I/O supply current	Full-speed idle, SE0 or suspend			10	22	µA
$I_{CC(susp)}$	Suspend supply current	SUSPND = HIGH (4)			10	22	µA
$I_{CC(dis)}$	Disable-mode supply current	$V_{CC(I/O)}$ not connected (4)			10	22	µA
$I_{CC(I/O)(sharing)}$	Sharing-mode I/O supply current	$V_{CC(5.0)}$ or $V_{reg(3.3)}$ not connected			10	22	µA
$I_{Dx(sharing)}$	Sharing-mode load current on D+ and D–	$V_{CC(5.0)}$ or $V_{reg(3.3)}$ not connected, SOFTCON = LOW, V_{Dx} = 3.6 V				10	µA
$V_{reg(3.3)th}$	Regulated supply-voltage detection threshold	1.65 V ≤ $V_{CC(I/O)}$ ≤ $V_{reg(3.3)}$, 2.7 V ≤ $V_{reg(3.3)}$ ≤ 3.6 V	Supply lost during power down			0.8	V
			Supply detect during power up (5)	2.4			
$V_{reg(3.3)hys}$	Regulated supply-voltage detection hysteresis	$V_{CC(I/O)}$ = 1.8 V			0.45		V
$V_{CC(I/O)th}$	I/O supply-voltage detection threshold	$V_{reg(3.3)}$ = 2.7 V to 3.6 V	Supply lost during power down			0.5	V
			Supply detect during power up	1.4			
$V_{CC(I/O)hys}$	I/O supply-voltage detection hysteresis	$V_{reg(3.3)}$ = 3.3 V			0.45		V

(1) I_{load} includes the pullup resistor current via $V_{pu(3.3)}$.
(2) In suspend mode, the typical voltage is 2.8 V.
(3) Maximum value is characterized only, not tested in production.
(4) Excluding any load current and $V_{pu(3.3)}/V_{sw}$ source current to the 1.5-kΩ and 15-kΩ pullup and pulldown resistors (200 µA typ)
(5) When $V_{CC(I/O)} < 2.7$ V, the minimum value for $V_{reg(3.3)th}$ (present) is 2 V.

Static Electrical Characteristics – Digital Pins

over recommended ranges of operating free-air temperature and supply voltage (unless otherwise noted)

PARAMETER		TEST CONDITIONS	$V_{CC(I/O)}$	MIN	MAX	UNIT
V_{IL}	LOW-level input voltage		1.65 V to 3.6 V		0.3 $V_{CC(I/O)}$	V
V_{IH}	HIGH-level input voltage		1.65 V to 3.6 V	0.6 $V_{CC(I/O)}$		V
V_{OL}	LOW-level output voltage	I_{OL} = 100 μA	1.65 V to 3.6 V		0.15	V
		I_{OL} = 2 mA			0.4	
		I_{OL} = 100 μA	1.8 V ± 0.15 V		0.15	
		I_{OL} = 2 mA			0.4	
		I_{OL} = 100 μA	2.5 V ± 0.2 V		0.15	
		I_{OL} = 2 mA			0.4	
		I_{OL} = 100 μA	3.3 V ± 0.3 V		0.15	
		I_{OL} = 2 mA			0.4	
V_{OH}	HIGH-level output voltage	I_{OH} = 100 μA	1.65 V to 3.6 V	$V_{CC(I/O)}$ – 0.15		V
		I_{OH} = 2 mA		$V_{CC(I/O)}$ – 0.4		
		I_{OH} = 100 μA	1.8 V ± 0.15 V	1.5		
		I_{OH} = 2 mA		1.25		
		I_{OH} = 100 μA	2.5 V ± 0.2 V	2.15		
		I_{OH} = 2 mA		1.9		
		I_{OH} = 100 μA	3.3 V ± 0.3 V	2.85		
		I_{OH} = 2 mA		2.6		
I_{LI}	Input leakage current			–1	1	μA
C_{IN}	Input capacitance	Pin to GND			3.5	pF

Static Electrical Characteristics – Analog I/O Pins

over recommended ranges of operating free-air temperature and supply voltage, V_{CC} = 4 V to 5.5 V or $V_{reg(3.3)}$ = 3 V to 3.6 V, V_{GND} = 0 V, T_A = –40°C to 85°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{DI}	Differential input sensitivity	$\|V_{I(D+)} - V_{I(D-)}\|$	0.2			V
V_{CM}	Differential common-mode voltage	Includes V_{DI} range	0.8		2.5	V
V_{IL}	LOW-level input voltage, single-ended receiver		2		0.8	V
V_{IH}	HIGH-level input voltage, single-ended receiver		0.4			V
V_{hys}	Hysteresis voltage, single-ended receiver				0.7	V
V_{OL}	LOW-level output voltage	R_L = 1.5 kΩ to 3.6 V			0.3	V
V_{OH}	HIGH-level output voltage	R_L = 1.5 kΩ to GND	2.8 (1)		3.6	V
I_{LZ}	OFF-state leakage current				1	μA
C_{IN}	Transceiver capacitance	Pin to GND			25	pF
Z_{DRV}	Driver output impedance	Steady-state drive	34 (2)	39	44	Ω
Z_{INP}	Input impedance		10			MΩ
R_{SW}	Internal switch resistance at $V_{pu(3.3)}$				13	Ω
V_{TERM}	Termination voltage for upstream port pullup (RPU)		3 (3) (4)		3.6	V

(1) $V_{OH(min)} = V_{reg(3.3)} - 0.2$ V
(2) Includes external resistors of 33 Ω ±1% on both D+ and D–
(3) This voltage is available at $V_{reg(3.3)}$ and $V_{pu(3.3)}$.
(4) In suspend mode, the minimum voltage is 2.7 V.

Dynamic Electrical Characteristics – Analog I/O Pins (D+, D–)[1] [2] Driver Characteristics, Full-Speed Mode

over recommended ranges of operating free-air temperature and supply voltage, V_{CC} = 4 V to 5.5 V or $V_{reg(3.3)}$ = 3 V to 3.6 V, $V_{CC(I/O)}$ = 1.65 V to 3.6 V, V_{GND} = 0 V, see Table 10 for valid voltage level combinations, T_A = –40°C to 85°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	MAX	UNIT
t_{FR}	Rise time	C_L = 50 pF to 125 pF, 10% to 90% of $\|V_{OH} - V_{OL}\|$ (see Figure 1)	4	20	ns
t_{FF}	Fall time	C_L = 50 pF to 125 pF, 90% to 10% of $\|V_{OH} - V_{OL}\|$ (see Figure 1)	4	20	ns
FRFM	Differential rise/fall time matching (t_{FR}/t_{FF})	Excluding the first transition from idle state	90	111.1	%
V_{CRS}	Output signal crossover voltage	Excluding the first transition from idle state (see Figure 10)	1.3	2	V

(1) Test circuit, see Figure 13
(2) Driver timing in low-speed mode is not specified. Low-speed delay timings are dominated by the slow rise/fall times t_{LR} and t_{LF}.

Dynamic Electrical Characteristics – Analog I/O Pins (D+, D–)[1] [2] Driver Characteristics, Low-Speed Mode

over recommended ranges of operating free-air temperature and supply voltage, V_{CC} = 4 V to 5.5 V or $V_{reg(3.3)}$ = 3 V to 3.6 V, $V_{CC(I/O)}$ = 1.65 V to 3.6 V, V_{GND} = 0 V, see Table 10 for valid voltage level combinations, T_A = –40°C to 85°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	MAX	UNIT
t_{LR}	Rise time	C_L = 200 pF to 600 pF, 10% to 90% of $\|V_{OH} - V_{OL}\|$ (see Figure 1)	75	300	ns
t_{LF}	Fall time	C_L = 200 pF to 600 pF, 90% to 10% of $\|V_{OH} - V_{OL}\|$ (see Figure 1)	75	300	ns
LRFM	Differential rise/fall time matching (t_{LR}/t_{LF})	Excluding the first transition from idle state	80	125	%
V_{CRS}	Output signal crossover voltage	Excluding the first transition from idle state (see Figure 10)	1.3	2	V

(1) Test circuit, see Figure 13
(2) Driver timing in low-speed mode is not specified. Low-speed delay timings are dominated by the slow rise/fall times t_{LR} and t_{LF}.

Dynamic Electrical Characteristics – Analog I/O Pins (D+, D–)[1] [2] Driver Timing, Full-Speed Mode

over recommended ranges of operating free-air temperature and supply voltage, V_{CC} = 4 V to 5.5 V or $V_{reg(3.3)}$ = 3 V to 3.6 V, $V_{CC(I/O)}$ = 1.65 V to 3.6 V, V_{GND} = 0 V, see Table 10 for valid voltage level combinations, T_A = –40°C to 85°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	MAX	UNIT
$t_{PLH(drv)}$	Driver propagation delay (VO/VPO, FSE0/VMO to D+, D–)	LOW to HIGH (see Figure 4)		18	ns
$t_{PHL(drv)}$		HIGH to LOW (see Figure 4)		18	
t_{PHZ}	Driver disable delay ($\overline{OE}$ to D+, D–)	HIGH to OFF (see Figure 2)		15	ns
t_{PLZ}		LOW to OFF (see Figure 2)		15	
t_{PZH}	Driver enable delay ($\overline{OE}$ to D+, D–)	OFF to HIGH (see Figure 2)		15	ns
t_{PZL}		OFF to LOW (see Figure 2)		15	

(1) Test circuit, see Figure 13
(2) Driver timing in low-speed mode is not specified. Low-speed delay timings are dominated by the slow rise/fall times t_{LR} and t_{LF}.

Dynamic Electrical Characteristics for Analog I/O Pins (D+, D–)(1) Receiver Timing, Full-Speed and Low-Speed Mode, Differential Receiver

over recommended ranges of operating free-air temperature and supply voltage, V_{CC} = 4 V to 5.5 V or $V_{reg(3.3)}$ = 3 V to 3.6 V, $V_{CC(I/O)}$ = 1.65 V to 3.6 V, V_{GND} = 0 V, see Table 10 for valid voltage level combinations, T_A = –40°C to 85°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	MAX	UNIT
$t_{PLH(rcv)}$	Propagation delay (D+, D– to RCV)	LOW to HIGH (see Figure 3)		15	ns
$t_{PHL(rcv)}$		HIGH to LOW (see Figure 3)		15	

(1) Test circuit, see Figure 13

Dynamic Electrical Characteristics for Analog I/O Pins (D+, D–)(1) Receiver Timing, Full-Speed and Low-Speed Mode, Single-Ended Receiver

over recommended ranges of operating free-air temperature and supply voltage, V_{CC} = 4 V to 5.5 V or $V_{reg(3.3)}$ = 3 V to 3.6 V, $V_{CC(I/O)}$ = 1.65 V to 3.6 V, V_{GND} = 0 V, see Table 10 for valid voltage level combinations, T_A = –40°C to 85°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	MAX	UNIT
$t_{PLH(se)}$	Propagation delay (D+, D– to VP, VM)	LOW to HIGH (see Figure 3)		18	ns
$t_{PHL(se)}$		HIGH to LOW (see Figure 3)		18

A. Full-speed mode: connected to D+
B. Low-speed mode: Connected to D–
C. Load capacitance:
   - C_L = 50 pF or 125 pF (full-speed mode, minimum or maximum timing)
   - C_L = 200 pF or 600 pF (low-speed mode, minimum or maximum timing)

A. Only for TUSB1105

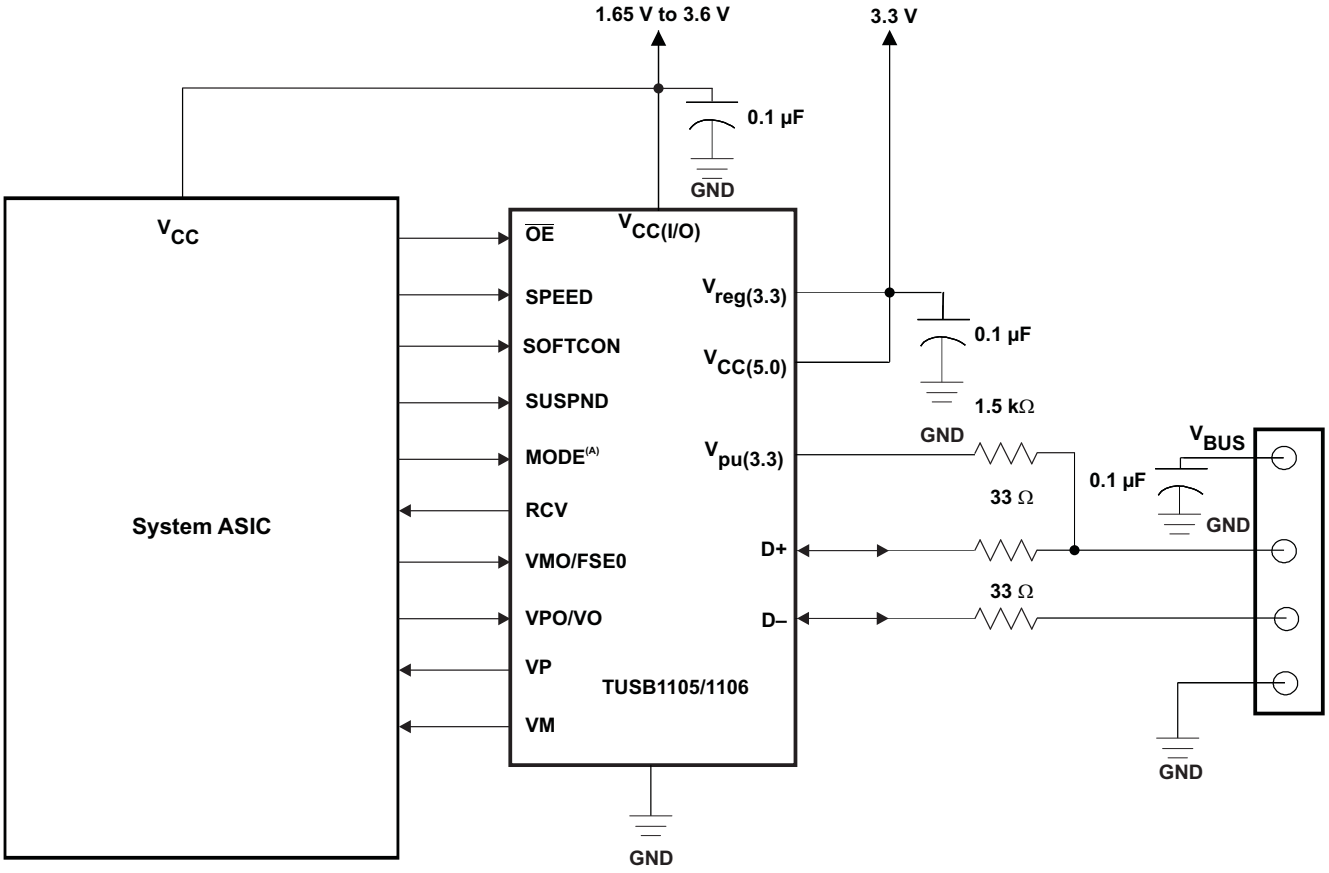

Figure 8. Peripheral-Side (Full-Speed) Regulator Bypass Mode

Peripheral-Side (Full-Speed) Regulator Bypass Mode

This mode is applicable when there is a 3.3-V supply already available on the board. The V_{BUS} pin of the USB connector, if left unused at the peripheral side, should be terminated with a 0.1-µF capacitor. While operating at full speed, the 1.5-kΩ resistor must be connected between the D+ line and $V_{PU(3.3)}$ or an external 3.3-V supply. When the $V_{CC(5.0)}$ and the $V_{reg(3.3)}$ are connected together, the device operates at regulator bypass mode. This enables power savings since the regulator is turned off.

A. Only for TUSB1105

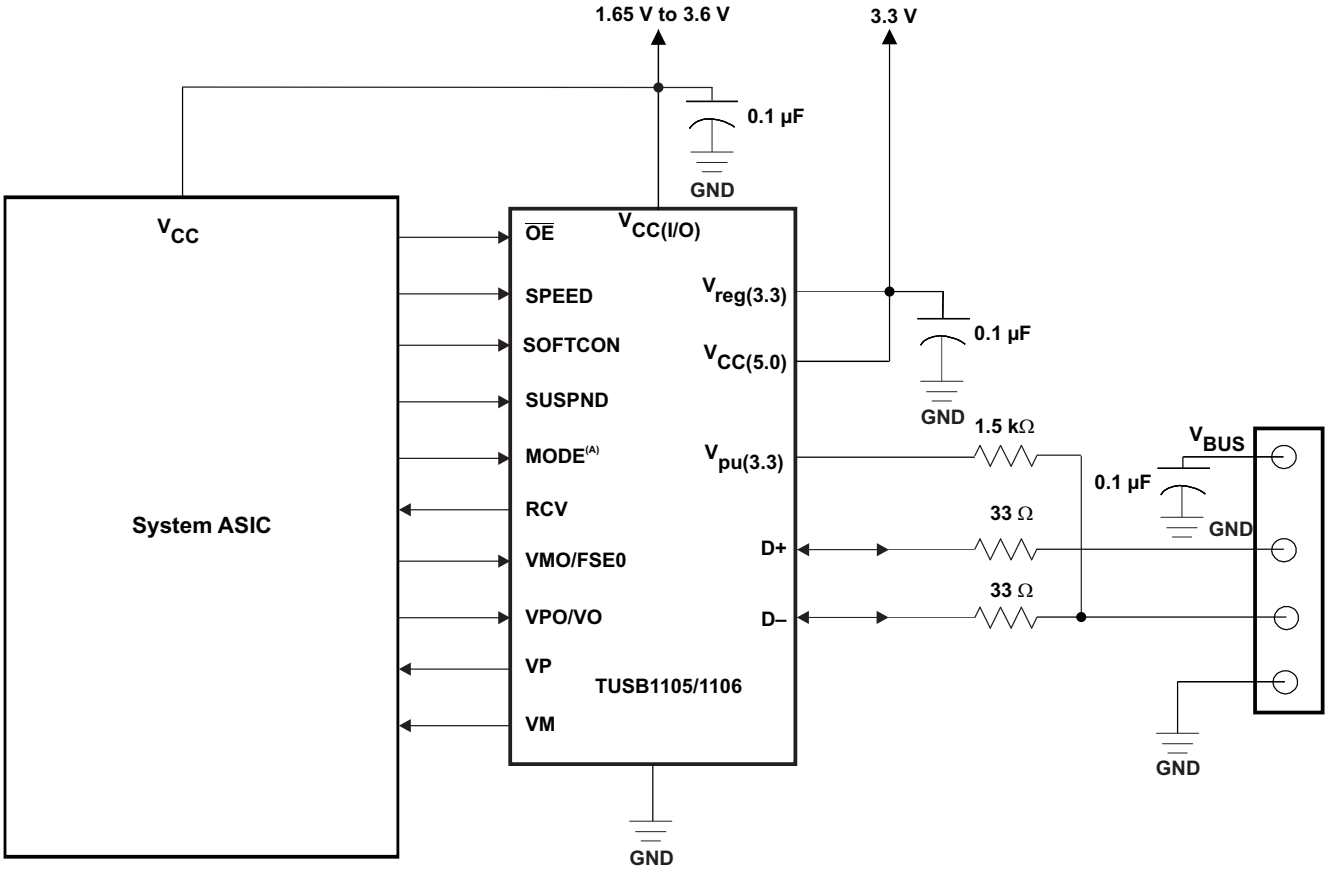

Figure 9. Peripheral-Side (Low-Speed) Regulator Bypass Mode

Peripheral-Side (Low-Speed) Regulator Bypass Mode

This mode is applicable when there is a 3.3-V supply already available on the board. The V_{BUS} pin of the USB connector, if left unused at the peripheral side, should be terminated with a 0.1-µF capacitor. While operating at low speed, the 1.5-kΩ resistor must to be connected between the D– line and $V_{PU(3.3)}$ or an external 3.3-V supply. When the $V_{CC(5.0)}$ and the $V_{reg(3.3)}$ are connected together, the device operates at regulator bypass mode. This enables power savings since the regulator is turned off.

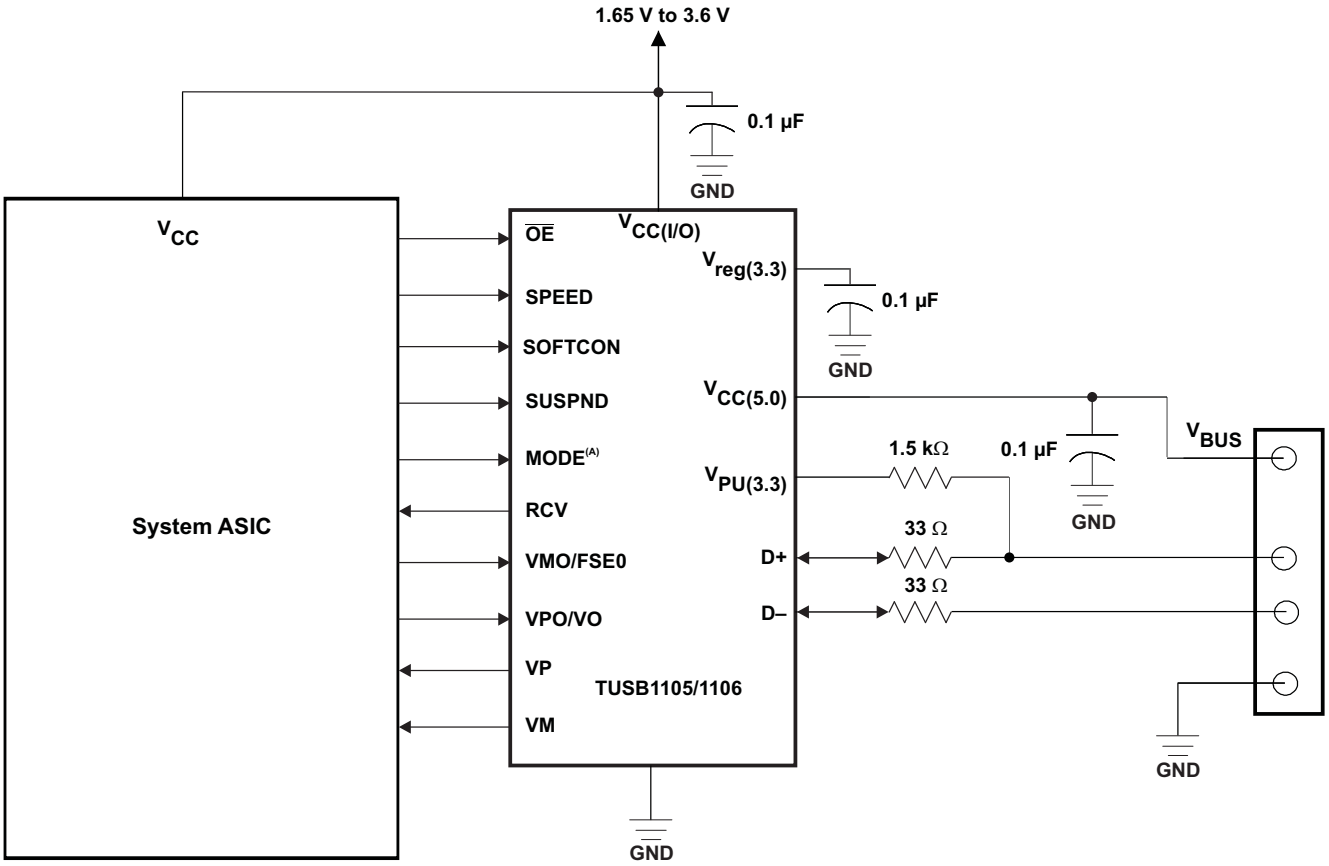

Figure 10. Peripheral-Side (Full-Speed) Internal Regulator Mode

A. Only for TUSB1105

Peripheral-Side (Full-Speed) Internal Regulator Mode

The USB side of the TUSB1105/1106 can be powered from the V_{BUS} line directly if a 3.3-V supply is not present on board. In this case, the internal regulator can be used to provide the 3.3-V supply for USB signaling. The $V_{CC(5.0)}$ is connected to the V_{BUS}, which receives 5-V supply from the host, and generates the 3.3-V output at the $V_{reg(3.3)}$ pin. In this mode, it is important that both $V_{CC(5.0)}$ and $V_{reg(3.3)}$ pins have individual bypass capacitors in the range of 0.1 µF. Powering $V_{CC(5.0)}$ through the V_{BUS} port of the USB connector realizes significant power saving for portable applications, such as cell phones, PDAs, etc. In this operating mode, the $I_{CC(5.0)}$ current is fed from the host. The USB-side power consumption, $I_{CC(5.0\ )}$ is 4 mA (with the regulator active), as opposed to logic-side $I_{CC(IO)}$ of 1 mA under full-speed operation. While operating at full speed, the 1.5-kΩ resistor must be connected between the D+ line and the $V_{PU(3.3)}$ or an external 3.3-V supply.

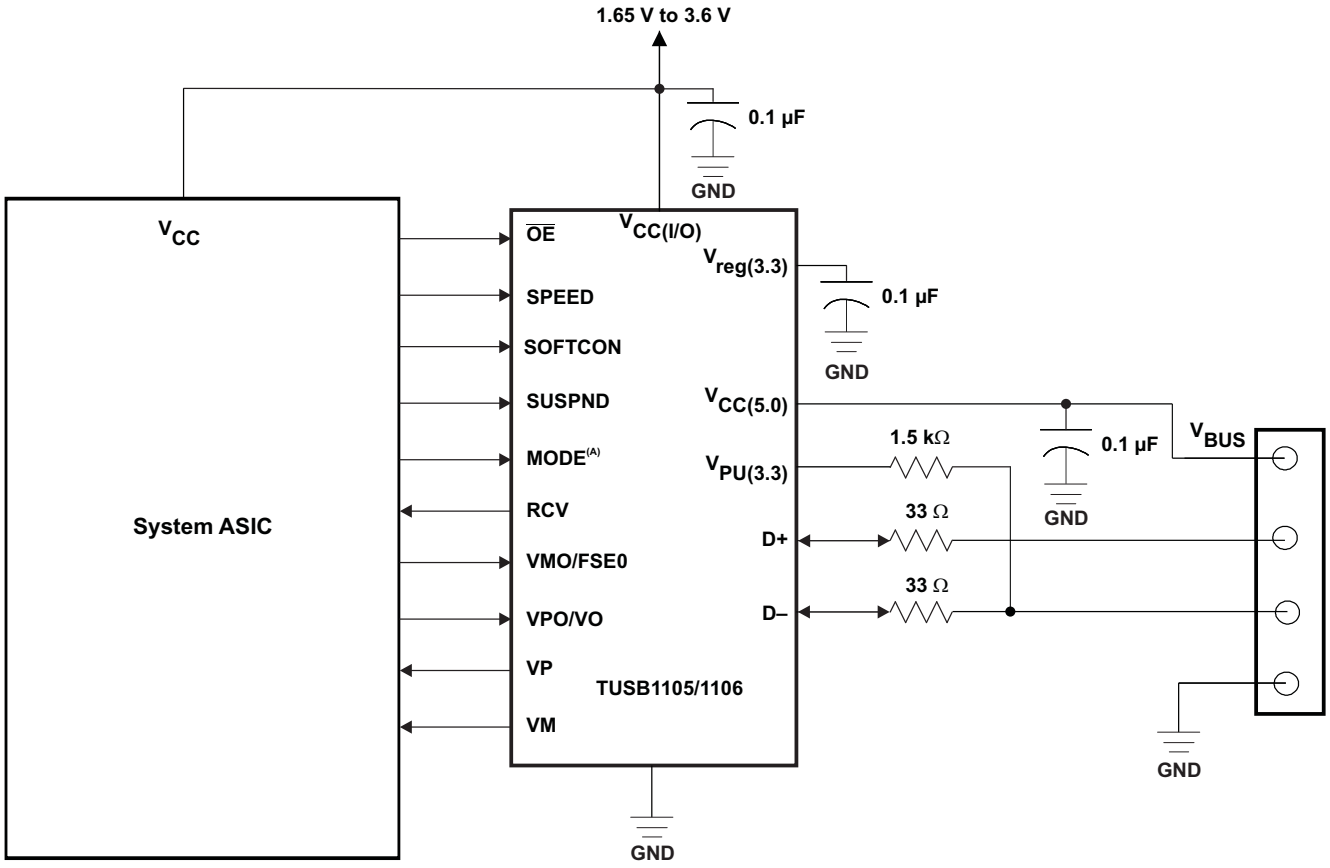

Figure 11. Peripheral-Side (Low-Speed) Internal Regulator Mode

A. Only for TUSB1105

Peripheral-Side (Low-Speed) Internal Regulator Mode

The USB side of the TUSB1105/1106 can be powered from the V_{BUS} line directly if a 3.3-V supply is not present on board. In this case, the internal regulator can be used to provide the 3.3-V supply for the USB signaling. The $V_{CC(5.0)}$ is connected to the V_{BUS}, which receives 5-V supply from the host, and generates the 3.3-V output at the $V_{reg(3.3)}$ pin. In this mode, it is important that both $V_{CC(5.0)}$ and $V_{reg(3.3)}$ pins have individual bypass capacitors in the range of 0.1 µF. Powering $V_{CC(5.0)}$ through the V_{BUS} port of the USB connector realizes significant power saving for portable applications, such as cell phones, PDAs, etc. In this operating mode, the $I_{CC(5.0)}$ current is fed from the host side. The USB-side power consumption, $I_{CC(5.0)}$ is 4 mA (with the regulator active), as opposed to logic-side $I_{CC(IO)}$ of 1 mA under full-speed operation. While operating at low speed, the 1.5-kΩ resistor must be connected between the D- line and the $V_{PU(3.3)}$ or an external 3.3-V supply.

A. Only for TUSB1105

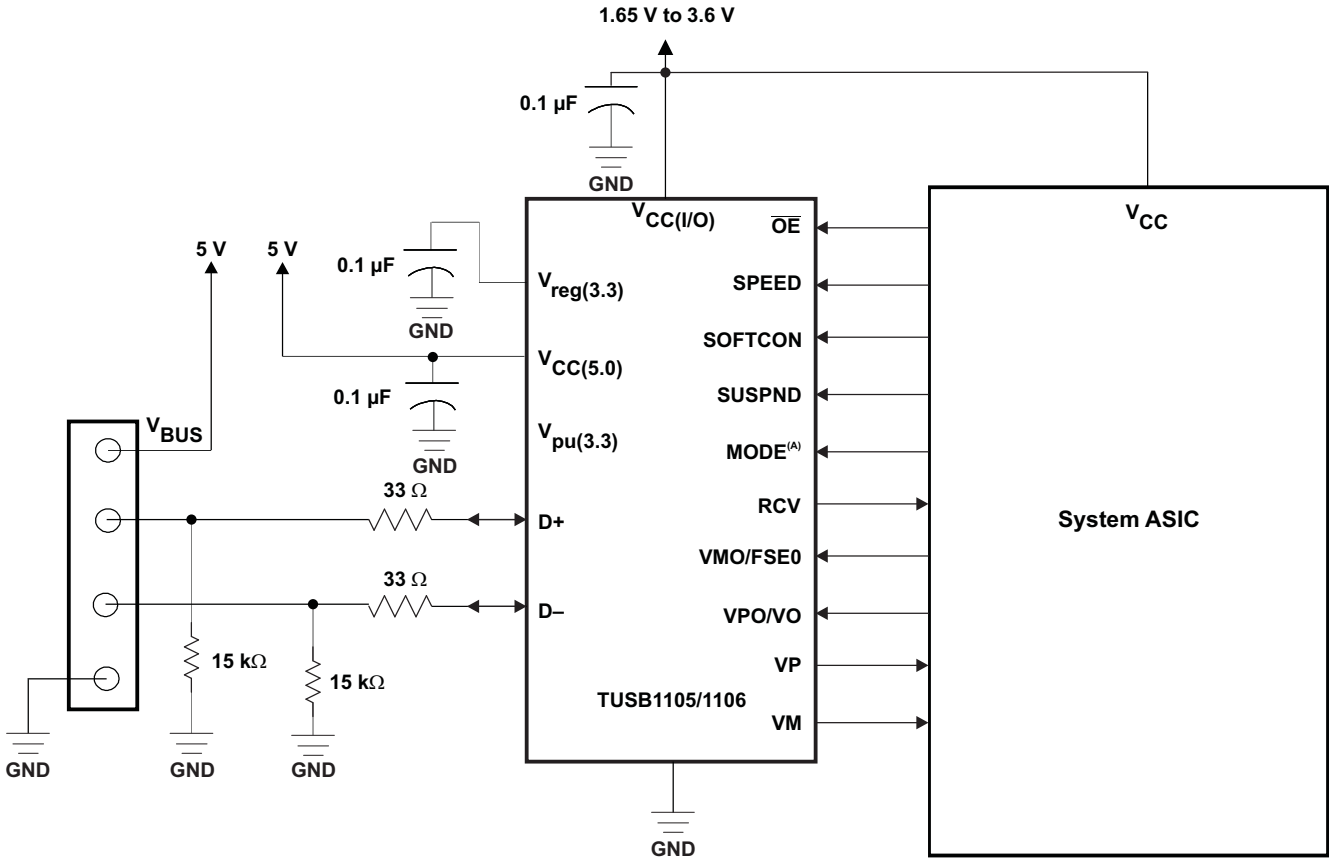

Figure 12. Host Side ($V_{CC(5.0)}$ Supplied From V_{BUS} Pin)

Host Side ($V_{CC(5.0)}$ Supplied From V_{BUS} Pin)

If there is no 3.3-V supply on board, an external 5-V supply can support the USB-side power needs. When the $V_{CC(5.0)}$ is connected to an external 5-V supply, the on-chip regulator generates the 3.3-V internal supply rail, which is used to drive the USB signaling levels at the USB side of the TUSB1105/1106. The logic-side I/Os can operate at any voltage range from 1.65 V to 3.6 V.

A. Only for TUSB1105

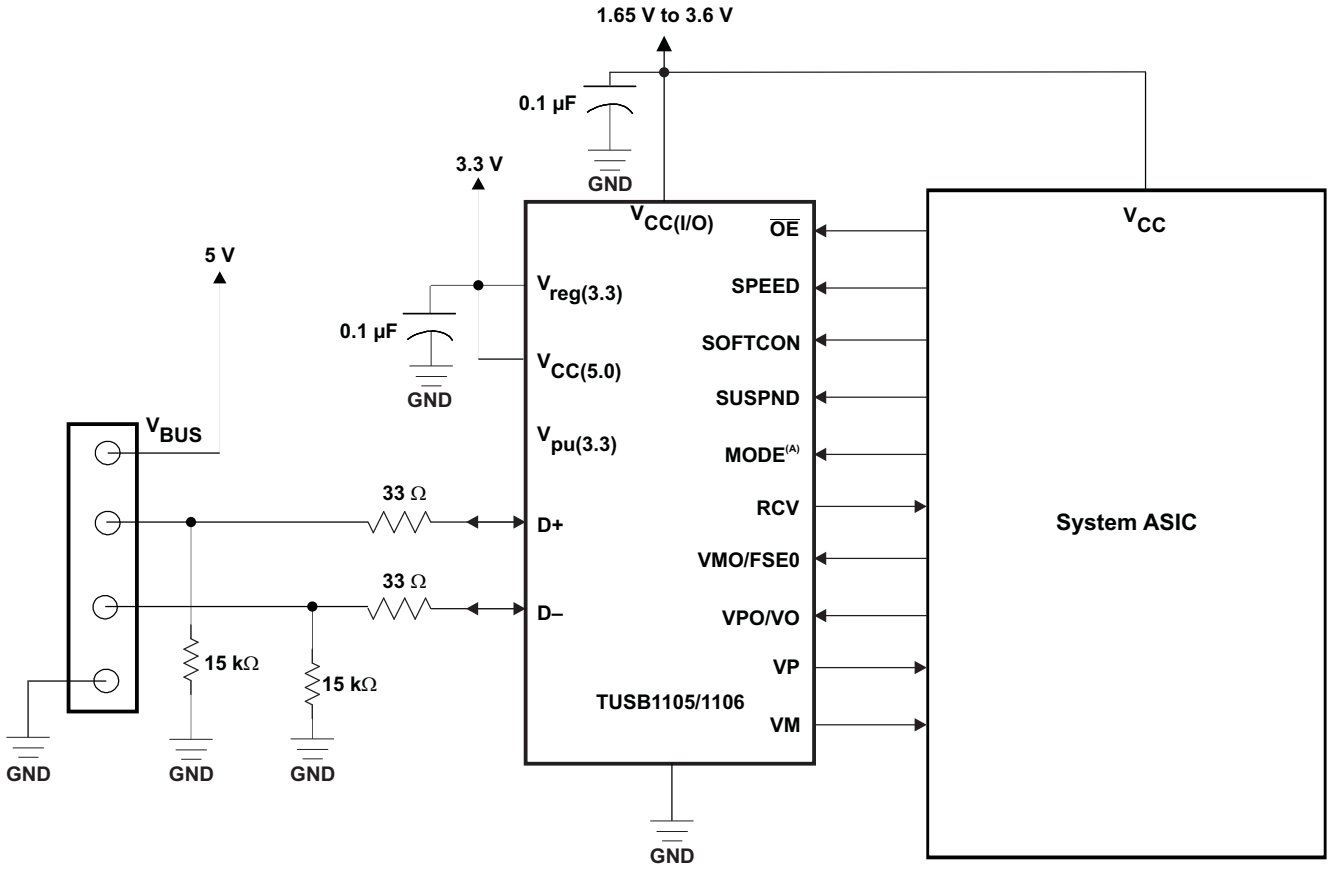

Figure 13. Host-Side (3.3-V Supply Present) Internal Regulator Bypass Mode

Host-Side (3.3-V Supply Present) Internal Regulator Bypass Mode

If a 3.3-V supply supports the USB-side power, $V_{CC(5.0)}$ and $V_{reg(3.3)}$ must to be tied together and connected to a 3.3-V supply. It also makes the regulator inactive.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

OTHER QUALIFIED VERSIONS OF TUSB1106 :

- Automotive: TUSB1106-Q1

NOTE: Qualified Version Definitions:

- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

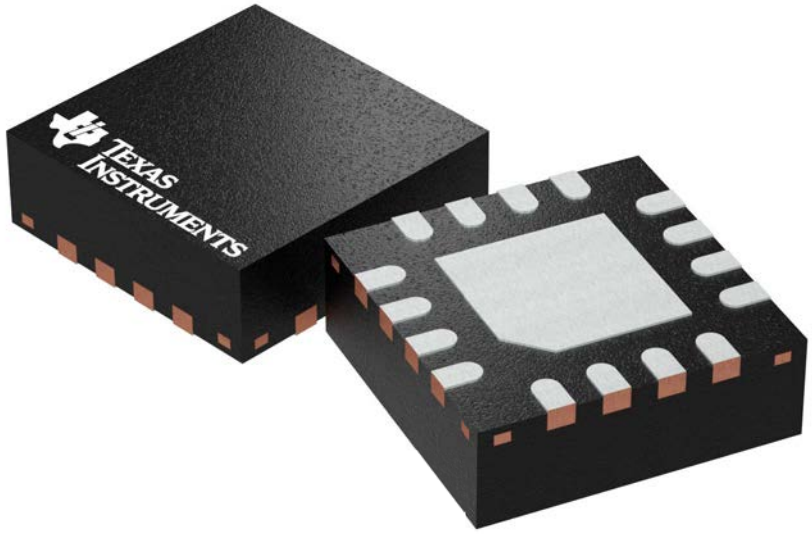
RGT 16 VQFN - 1 mm max height

PLASTIC QUAD FLATPACK - NO LEAD



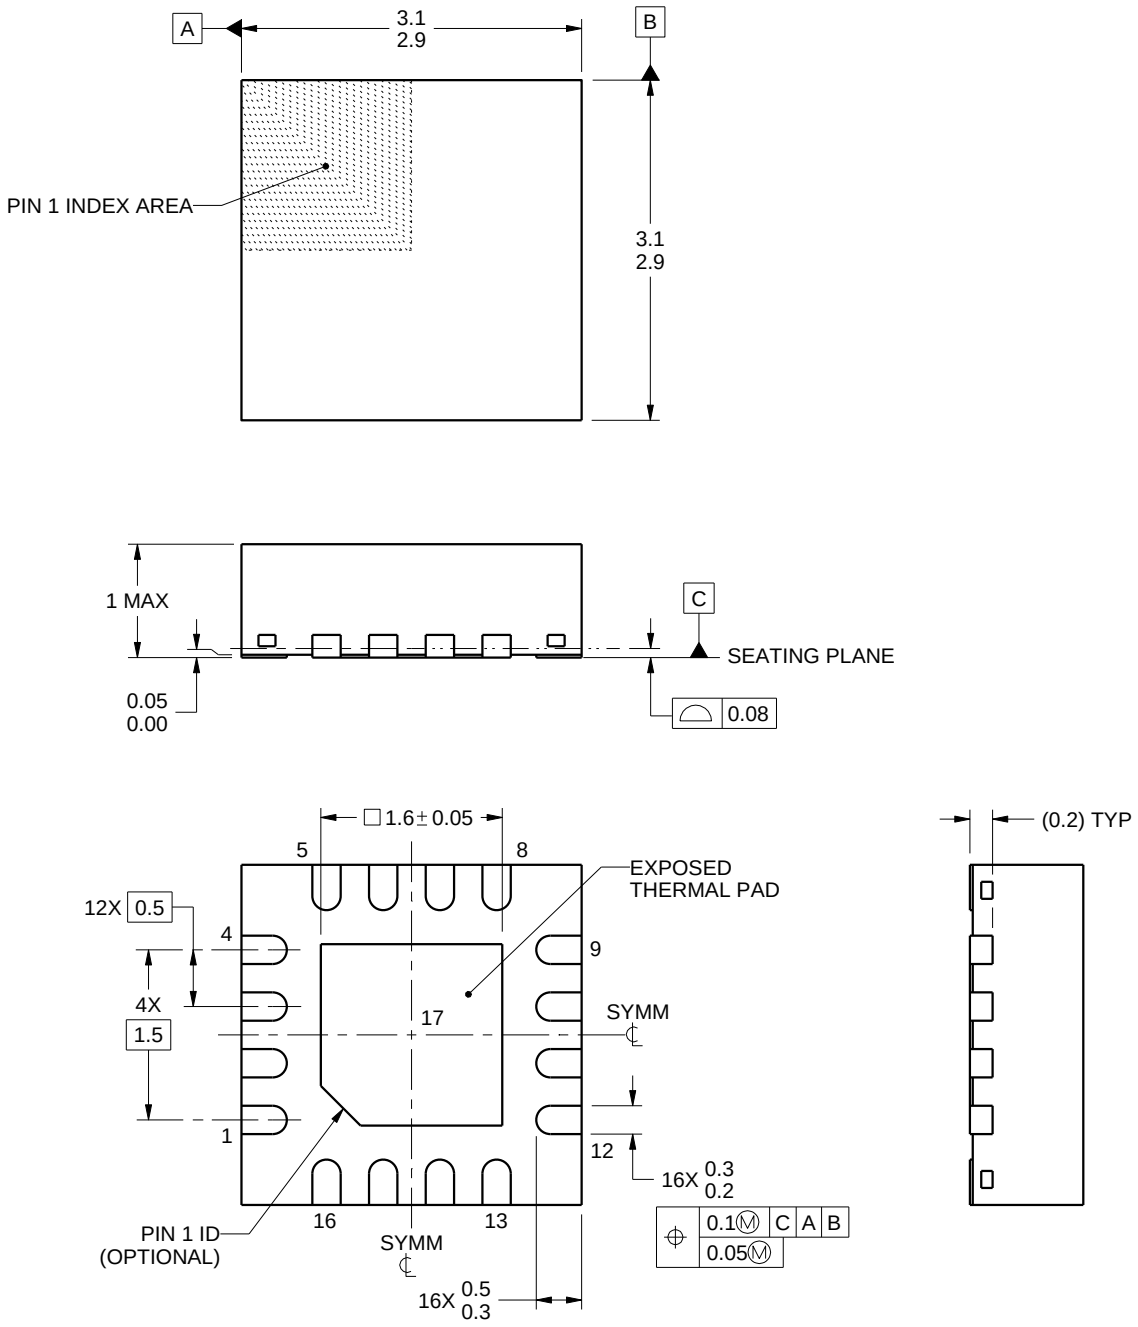
Images above are just a representation of the package family, actual package may vary.
Refer to the product data sheet for package details.

PACKAGE OUTLINE

RGT0016B

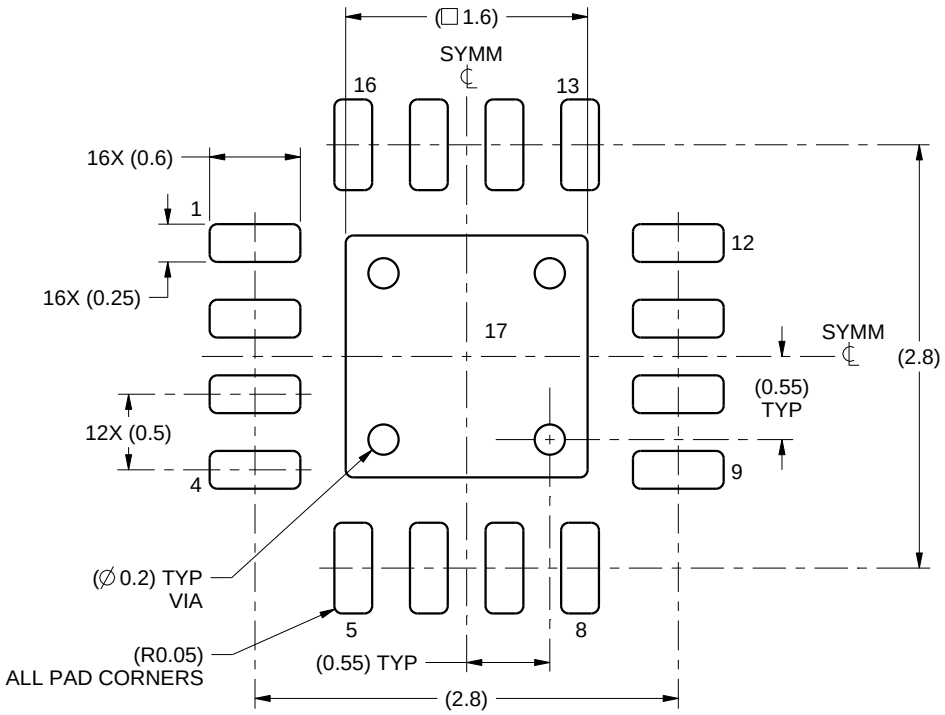
VQFN - 1 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

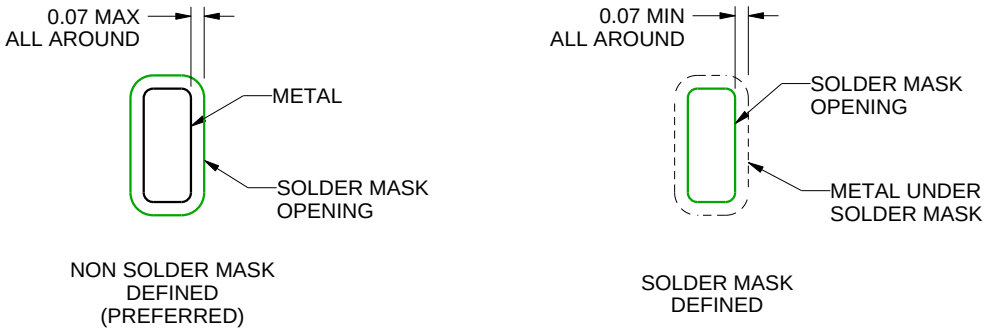


NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.



LAND PATTERN EXAMPLE
SCALE:20X

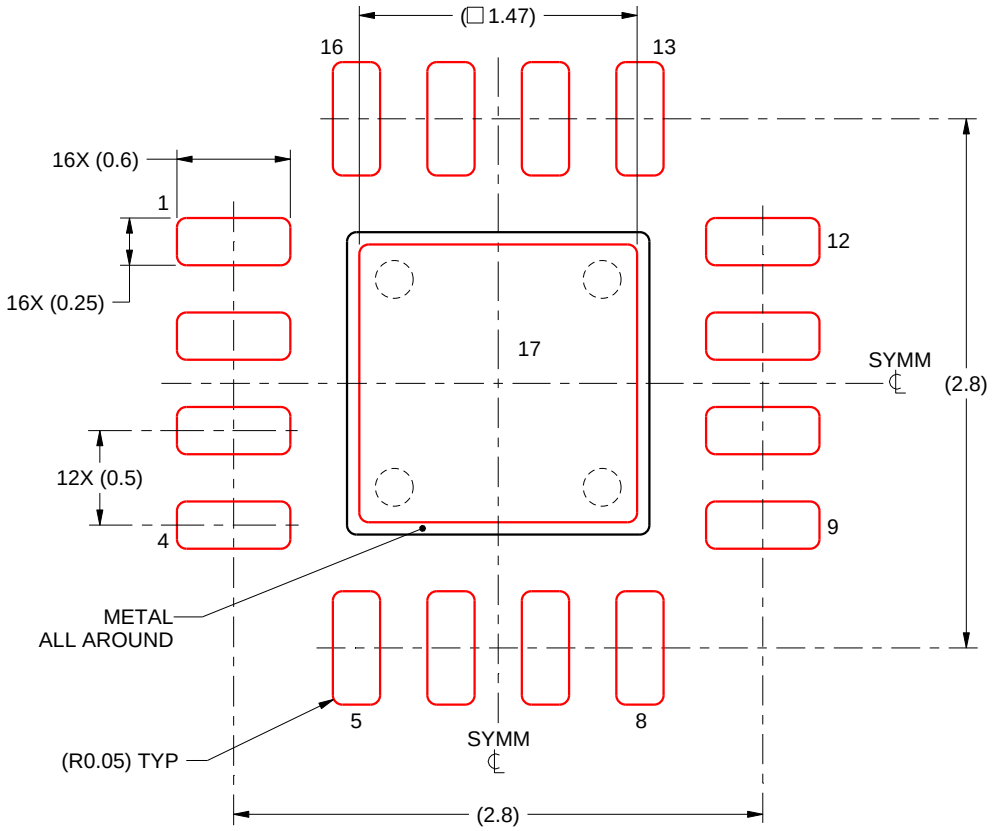


SOLDER MASK DETAILS

4219033/A 08/2016

NOTES: (continued)

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271).
5. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.



SOLDER PASTE EXAMPLE

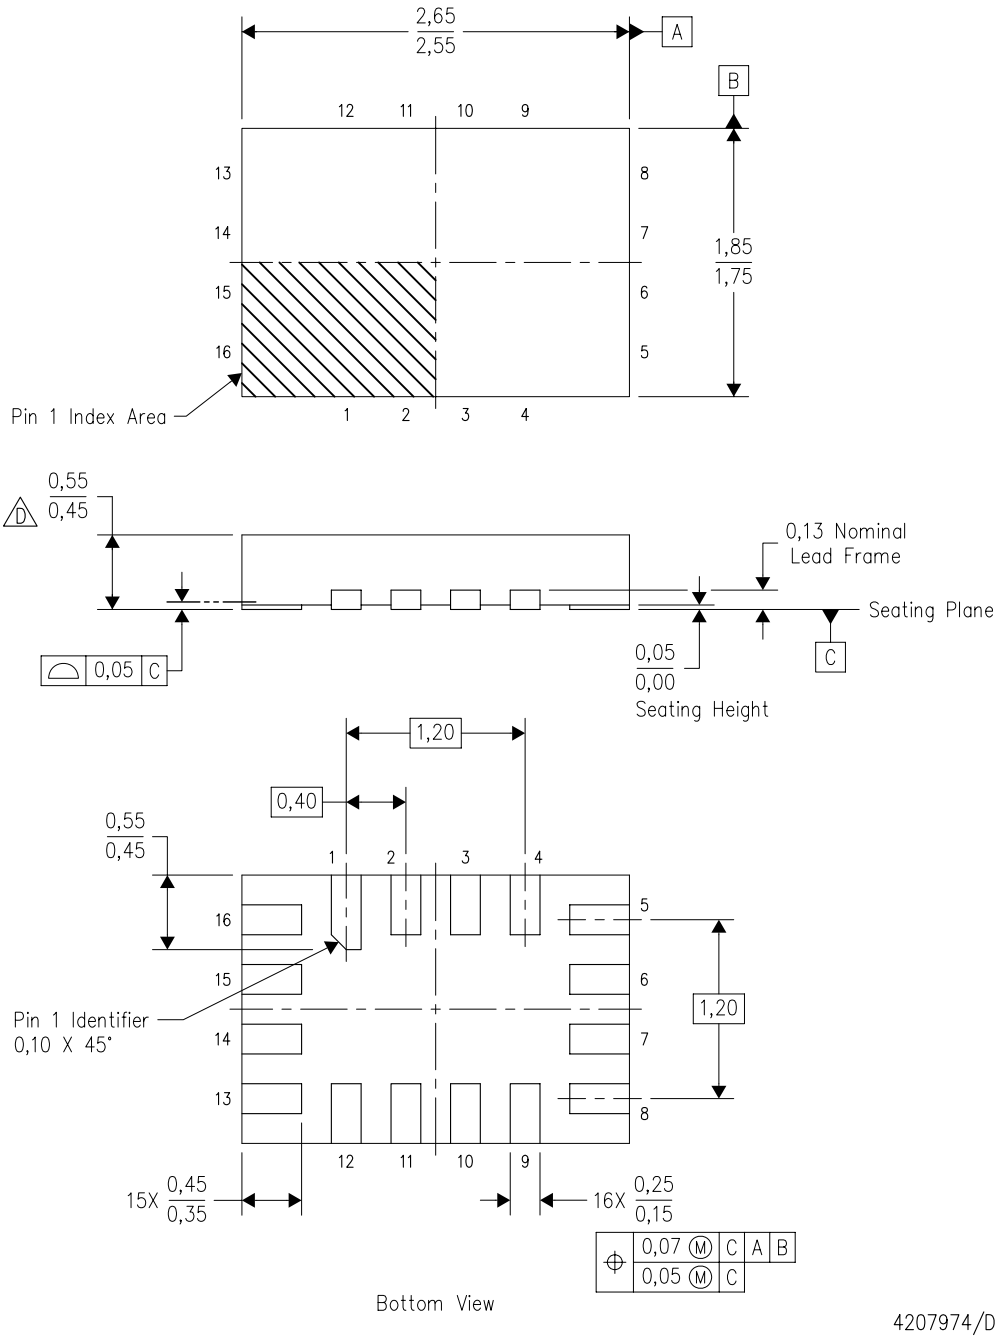
EXPOSED PAD 17:
84% PRINTED SOLDER COVERAGE BY AREA UNDER PACKAGE
SCALE:25X

4219033/A 08/2016

NOTES: (continued)

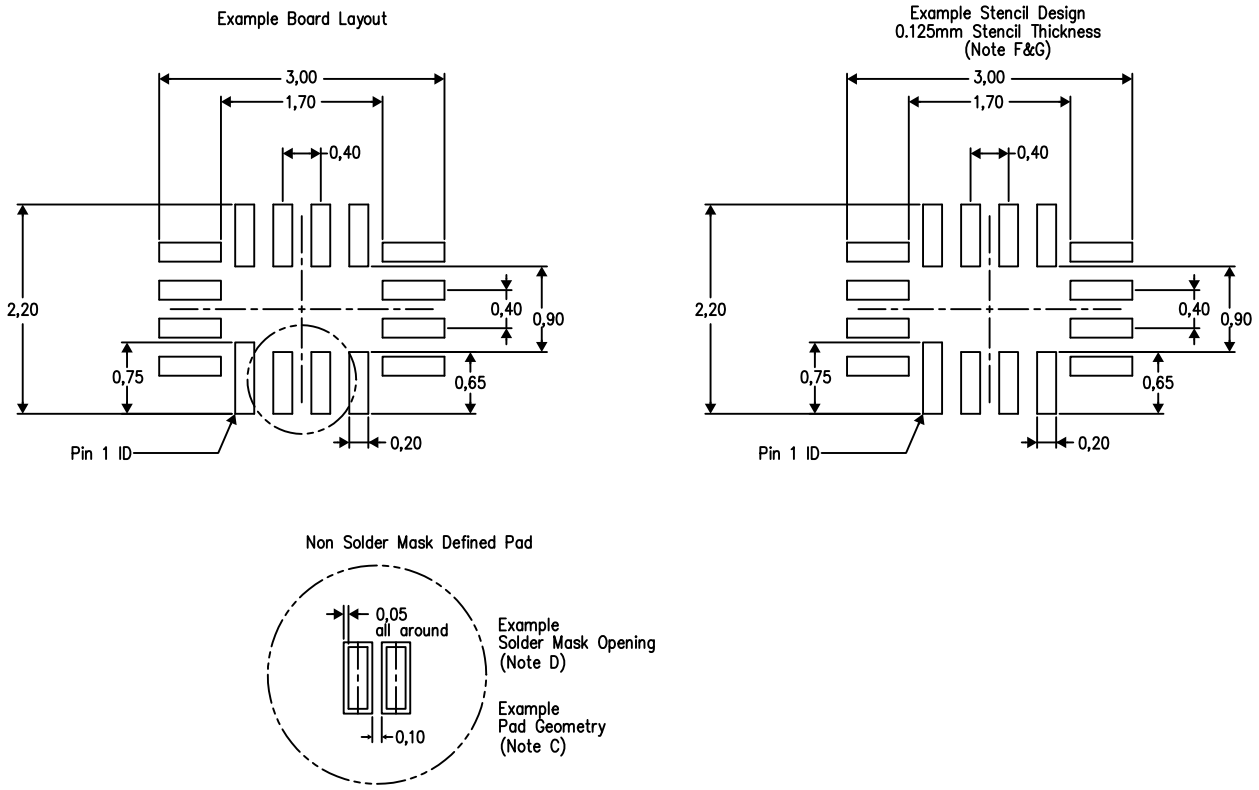
6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

RSV (R–PUQFN–N16) PLASTIC QUAD FLATPACK NO–LEAD



NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M–1994.
B. This drawing is subject to change without notice.
C. QFN (Quad Flatpack No–Lead) package configuration.
D. This package complies to JEDEC MO–288 variation UFHE, except minimum package thickness.

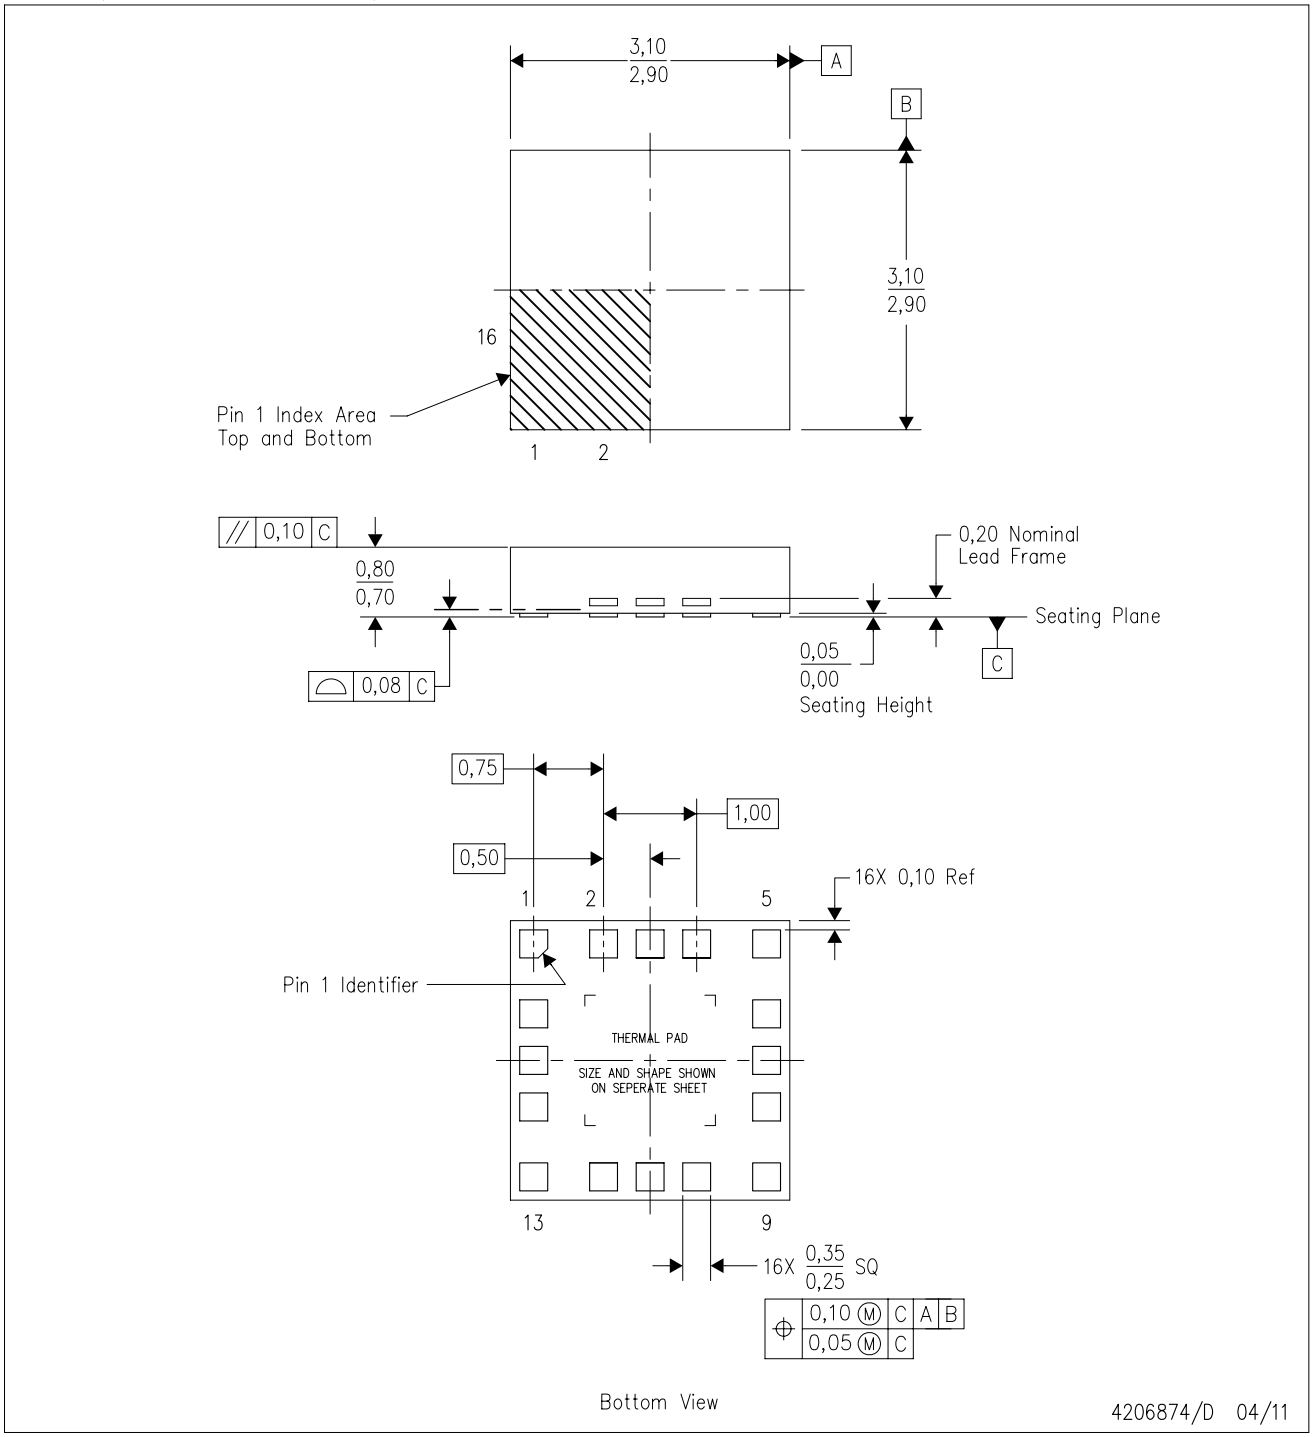
RSV (R–PUQFN–N16) PLASTIC QUAD FLATPACK NO–LEAD



4208244/C 02/13

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Publication IPC–7351 is recommended for alternate designs.
D. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
E. Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
F. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
G. Side aperture dimensions over–print land for acceptable area ratio > 0.66. Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.

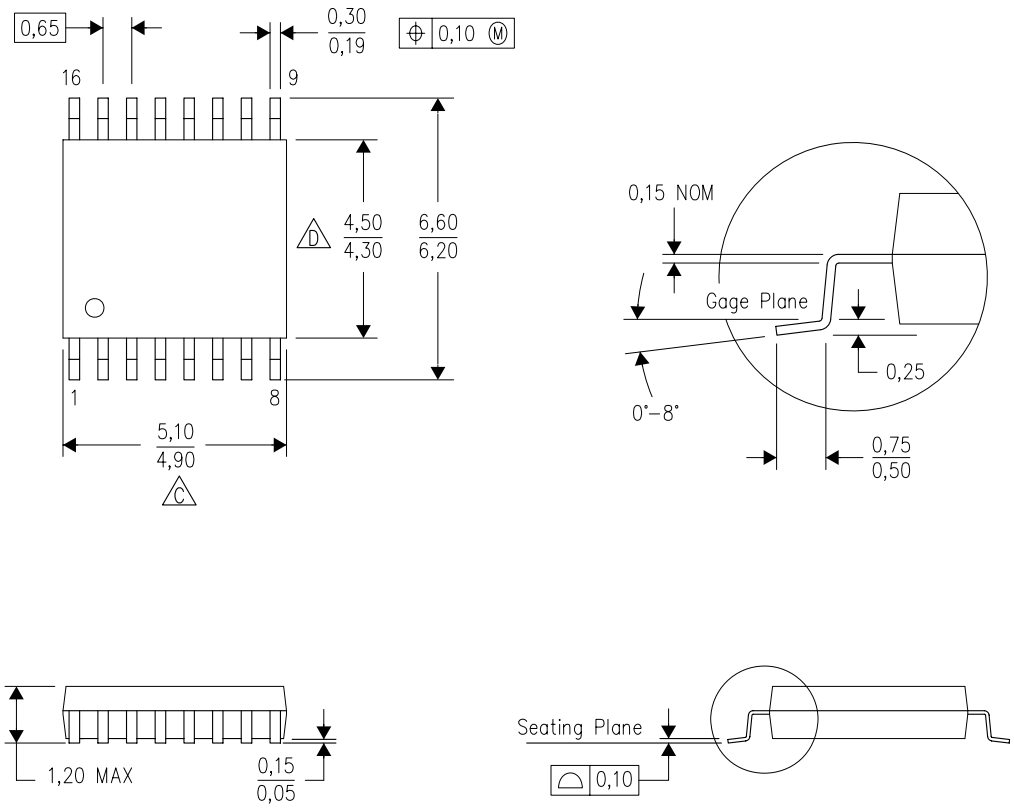
RTZ (S–PWQFN–N16) PLASTIC QUAD FLATPACK NO–LEAD



4206874/D 04/11

NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M–1994.
B. This drawing is subject to change without notice.
C. QFN (Quad Flatpack No–Lead) package configuration.
D. The package thermal pad must be soldered to the board for thermal and mechanical performance.
E. See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.

PW (R–PDSO–G16) PLASTIC SMALL OUTLINE



4040064–4/G 02/11

NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M–1994.
B. This drawing is subject to change without notice.
C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0,15 each side.
D. Body width does not include interlead flash. Interlead flash shall not exceed 0,25 each side.
E. Falls within JEDEC MO–153

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (http://www.ti.com/sc/docs/stdterms.htm) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
